CONTENTS

OF THE

REGISTRAR GENERAL'S ANNUAL REPORT FOR 1885.

REPORT:— PAGE

INCREASE of POPULATION iii

MARRIAGES. Marriage-rate; Relation between Marriage Rate and commercial activity; Forms of Marriage; Marriages of Jews; Previous condition of Persons married; Ages of Persons married, and their variation in different occupations; Signatures in Marriage Registers; Certified Places of Worship; Buildings registered for the Solemnisation of Marriages . . . . . v-x

BIRTHS. Numbers and Rates; Sex; Illegitimate Births xi

DEATHS. General death-rate; Sex; Ages; Infant Mortality; Urban and Rural Mortality; Registered Causes of Death; Decline of Scarlet Fever Mortality; Deaths and Death-rates from Hydrophobia; Mortality Statistics of Diabetes; Certification of Causes of Death . xi-xxiii

PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS; NUMBER of SEARCHES in the Registers and of CERTIFICATES granted at the CENTRAL OFFICE . . . . . xxiii-xxiv

THE ARMY AND NAVY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD; STRENGTH and MORTALITY of the NAVY . xxiv

BIRTHS and DEATHS of BRITISH SUBJECTS at SEA; MARINE REGISTER BOOK; MORTALITY of MERCANTILE MARINE . . . . xxiv-xxv

INTERNATIONAL VITAL STATISTICS. Marriage, Birth, and Death Rates xxv

METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S. . . . xxvi-xxviii

PRELIMINARY TABLES . . . . . xxix-cvii

ABSTRACTS:—

BIRTHS (distinguishing Legitimate and Illegitimate) DEATHS and MARRIAGES Registered in England, in Registration Divisions, Counties, and Districts; and BIRTHS and DEATHS in sub-districts . 1-63

MARRIAGES, Analysis of, in Registration Divisions and Counties, distinguishing the mode of Solemnisation; the number in each quarter of the year; the Civil Condition of Persons married; those of Full and not of Full Age; and the Signatures in the Marriage Register 64-67

AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows 68-70

DEATHS of Males and Females in Public Institutions. . . . 74-92

DEATHS of Males and Females at different Age-periods in REGISTRATION DIVISIONS and COUNTIES 93-103

CAUSES of DEATH of Males and Females in England and Wales at different Age-periods 105-113

A 23235. Wt. 8604.

ABSTRACTS—*continued.* PAGE

Causes of Death of Males and Females in London at different Age-periods 114–121

Causes of Death of Males and Females in each Registration County 122–145

Deaths from certain Selected Causes, and Inquest Cases, in Registration Divisions, Counties, and Districts . . 146–178

Deaths from Accident and Negligence, distinguishing Sex and Age . 179–185

Deaths from Suicide, distinguishing Sex, Age, and Method . . . 186–187

Deaths from Murder, distinguishing Sex, Age, and Method . . 188–189

Deaths from Manslaughter, distinguishing Sex, Age, and Method . . 190–191

Indexes of Districts, Sub-districts, and of certain Towns, referring to Numbers used in the several Tables of Abstracts 192–207

REPORT

TO

The Right Honourable CHARLES T. RITCHIE, M.P., President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
21st December, 1886.

(1885.)

SIR,

I HAVE the honour to submit to you the following report on the births, deaths, and marriages, registered in England and Wales in the year 1885.

Increase of Population.—The births and deaths registered in the year numbered respectively 894,270 and 522,750, so that the natural increment, or excess of births over deaths, was 371,520, and equal to 1·36 per cent. of the estimated population at the beginning of the year. The population of England and Wales, as enumerated in April 1881, consisted of 25,974,439 persons. The excess of births over deaths from that date to the middle of 1885 was 1,594,611; so that the population at the later date, if its growth were determined simply by the balance between births and deaths, would have been 27,569,050. This, however, takes no account of emigration and immigration; and, as there are no data for determining with accuracy the balance between these two factors, the best method of estimating the population is to assume that the rate of growth which existed in the last intercensal period has been maintained in the years that have since elapsed. On this, which is the usual, hypothesis the population of England and Wales in the middle of 1885 consisted of 27,499,041 persons, of whom 13,381,817 were males, and 14,117,224 were females. It is on this population that the rates in this report have been calculated.

MARRIAGES.

The marriages registered in 1885 numbered 197,745, giving a rate of 14·4 persons married to 1000 living. This was the lowest marriage-rate recorded since civil registration began, and had only once been equalled, namely in 1879. In the quinquennium 1881–5, the rate averaged only 15·1, having been 15·3 and 17·1 in the two immediately preceding quinquennia, and having averaged 16·3 in the 48 years since civil registration began. (Tables 2 and 3.)

It has been pointed out in several previous reports (see especially 44th Annual Report, p. vi.) that the statement frequently made, that marriages increase as the price of food diminishes, though it may have been true in England in earlier periods, and may perhaps still be true in some other countries, is certainly not a correct statement of the fluctuations that have

occurred for many years past in this country. Indeed the very opposite has been the case, and the marriage-rate has on the whole varied not inversely but directly with the price of food, or rather of wheat. (Table A.)

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860–85.*

YEARS.	Marriage-rate.	Value per Head of Population of United Kingdom.			Average Price of Wheat per Quarter.	Amount cleared at the Bankers' Clearing House per Head of Population.
		Exports of British Produce.	Imports.	Total Exports and Imports.		
Cols.	1.	2.	3.	4.	5.	6.
		£ s. d.	£ s. d.	£ s. d.	s. d.	£
1860	17·1	4 14 5	7 6 4	13 0 8	53 3	—
1861	16·3	4 6 4	7 10 1	13 0 3	55 4	—
1862	16·1	4 4 10	7 14 4	13 8 0	55 5	—

1884	15·1	6 9 7	10 16 11	19 1 6	35 8	214
1885	14·4	5 17 3	10 4 3	17 13 7	32 10	200

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures in the value columns are derived from the Board of Trade Statistical Abstracts. The figures showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are also derived from the Board of Trade Statistical Abstracts.

The year 1885 was an additional example of this; for in it the marriage-rate and the price of wheat both fell very considerably. What may be the explanation of this is a question for political economists; the following suggestion may, however, be offered. So long as the standard of living is extremely low among the working classes, the question of marrying or not marrying is decided simply by the possibility or probability of getting sufficient food, and consequently the price of food is then the main factor in determining the marriage-rate; but when the standard of living has been very considerably raised, as it has been shown to have been among the working classes in this country in recent years,* mere sufficiency of food is no longer held to be an adequate justification of marriage, and consequently

* See Mr. Giffen's papers in the Journal of the Statistical Society, vol. xlvi., part iv., and vol. xlix., part i.

the price of wheat ceases to be the one determining factor, and becomes quite subordinate to the more important factor, the amount of wages; and as this is determined by the demand for labour, and this again, speaking generally, by the amount and value of goods produced and exported, the marriage-rate fluctuates with the exports of British goods, rather than with the cheapness of food. This, however, would only explain why marriages do not increase when food is cheap; and would not explain why they increase, as they apparently do on the whole, when food is dear. The suggestion was made in a former report, and, though not very satisfactory, may here be repeated, that with increased exports, that is with increased wages or increased number of persons earning wages, there is a greater consumption of bread, and a consequent rise in the price of wheat. The whole question, however, seems to be one that requires and deserves the attention of experts.

Forms of Marriage.—Of the 197,745 marriages celebrated in 1885, 139,913, or 70·8 per cent., were solemnised according to the rites of the Established Church, and 57,832, or 29·2 per cent., otherwise. The proportions in the immediately preceding year had been 70·7 and 29·3 respectively; and, though the difference between the two years was so excessively small, it is still noteworthy as being the only occasion, save two, since civil registration began in which the proportion of Church marriages to total marriages showed an increase on the preceding year. (Table 6.)

The following Table (Table B.) shows what proportions of the Church marriages were by licence, banns, and Superintendent Registrar's certificate, respectively. It will be noted that the proportion of marriages by banns increased at the expense of the marriages by licence, as had been the case continuously since 1856–60.

TABLE B. — OF 100 CHURCH MARRIAGES, the PROPORTION by SPECIAL LICENCE, LICENCE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841–85.*

PERIODS OF FIVE YEARS.	Total.	Special Licence.	Licence.	Banns.	Superintendent Registrar's Certificate.
1841–45	100	·01	15·42	83·28	1·29

* The Church marriages not otherwise described have been proportionally distributed over the headings "Special Licence," "Licence," &c.

In 507 of the Church marriages the officiating clergymen neglected to enter in the register the particulars required for the accurate construction of the above Table; an increase of carelessness on the part of clergymen, as compared with the two preceding years. (Table 5.)

It is noticeable that while the marriages in the Established Church, the Roman Catholic marriages, the Quaker marriages, the marriages of other Christian denominations, and the marriages in the Superintendent Registrars' offices, each and all show decline, the marriages of Jews show exceptionally (Table 5) a considerable increase. They have risen every year since 1879, and, if the number for that year be compared with the number for 1885, it will be found that the increase in the six years has been no less than 39 per cent. It is believed that this increase is due to two causes, namely, an increase in the number of Jews in this country owing to immigration from persecuted districts abroad, and secondly a reduction in the fees for marriage by Jewish rites, owing to which a smaller proportion of Jewish marriages takes place in Superintendent Registrars' offices.

In the 44th Annual Report some particulars were given as to the distribution of marriages by months and days. To the facts there stated it may be further added, that the prejudice against marrying in May is felt by the Jews no less than by the general population; and further that there is a period of three weeks later in the year when no Jewish marriages are celebrated; namely, the anniversary of the three weeks which elapsed between the taking of the walls of Jerusalem and the destruction of the Temple. As regards days of the week, by far the largest number of Jewish marriages are, and have been from time immemorial, celebrated on Wednesdays, some few on Tuesdays and Sundays. Thus, of 285 Jewish weddings in 1885 in the City of London, 215 were on Wednesdays, 37 on Sundays, 33 on Tuesdays, and none on any other day of the week.

First Marriages; Re-marriages.—Of the 197,745 men whose marriages were recorded in 1885, 172,681,* or 87·3 per cent., were bachelors, and 25,064, or 12·7 per cent., were widowers. Of the 172,681 bachelors, 164,812, or 95·4 per cent., married spinsters, and 7869, or 4·6 per cent., married widows. Of the 25,064 widowers who re-married, 15,510, or 61·9 per cent., married spinsters, and 9554, or 38·1 per cent., married widows.

Of the 197,745 women whose marriages were recorded in 1885, 180,322,* or 91·2 per cent., were spinsters, and 17,423, or 8·8 per cent., were widows. Of the 180,322 spinsters who married, 164,812 or 91·4 per cent., married bachelors, and 15,510, or 8·6 per cent., married widowers. Of the 17,423 widows who re-married, 7869, or 45·2 per cent., married bachelors, and 9554, or 54·8 per cent., married widowers.

As compared with the returns for 1884, the numbers of marriages of bachelors, of spinsters, of widowers, and of widows, all showed a decline.

Marriages of Divorced Persons.—The number of persons married in the year who were described as divorced was 170, and included 92 men and 78 women. This was an increase of 42 per cent. upon the number in 1884. Of the 92 divorced men, 66 married spinsters, 19 married widows, and 7 married divorced women. Of the 78 divorced women, 55 married bachelors, 16 married widowers, and 7 married divorced men.

Ages at Marriage.—In 16,168, or 8·2 per cent., of the marriages, the ages of both the contracting parties were not inserted in the register. The mean age at marriage of the remaining 181,577 couples was 28·2 years for the men and 25·9 for the women. The mean age of the widowers was 43·6 and of the widows 40·0; while that of the bachelors was 26·1 and of the spinsters 24·6 years. In 1873, a year of great prosperity and of maximum marriage-rate, the mean age of bachelors at marriage was 25·6 and of spinsters 24·2, and these mean ages were the lowest

* The 92 divorced men who re-married in the year are here counted as bachelors nd the 78 divorced women as spinsters.

recorded. But, from that date, with the fall of the marriage-rate, has simultaneously been recorded a gradual rise in the mean ages, until in 1885 the figures given above were reached, these being the highest as yet recorded. Marriages have become not only fewer, but are delayed to a somewhat more advanced age.

It is a matter of common observation that among working men marriage is not only more general but takes place at an earlier age than is the case among the upper and middle classes; but there do not appear to be any precise statistics bearing on the subject. The following Table, therefore, based upon a large number of marriages of bachelors registered in 1884–85, may be of some interest. It gives the proportion of marriages at different ages per 1000 marriages at all ages in several groups of men following different occupations. It shows, for instance, that in 169 out of 1000 marriages of miners the bridegroom is under age, and in 535 more is between 21 and 25 years of age; whereas among the professional and independent class in only 7 per 1000 marriages is the bridegroom under age, and in only 144 more between 21 and 25 years of age. It is necessary, however, to note that the Table can only be used for such comparative purposes with some caution; inasmuch as the age-distribution of the men employed differs itself very much in different groups. For instance, to take an extreme example, it would be utterly fallacious to compare the ages at marriage of 1000 clergymen with the ages at marriage of 1000 labourers, for there are no clergymen under 23 years of age, whereas a very large proportion of labourers are under this age.

To meet this difficulty, so far as possible, in the professional group have been included students of law, medicine, theology, &c., as also all men returned simply as gentlemen; so also with shopkeepers have been included shopmen; and with farmers their sons or near relatives living with them. By such expedients something has been done to equalise the several groups in respect of age-distribution; still the equalisation can only have been partial, and consequently, as before said, comparison between the several groups in respect of marriage-age distribution must be conducted with much caution, and small differences must certainly be disregarded.

The figures, however, show clearly at what very early ages working men undertake the expense of marriage, and how very much later the more prudent classes venture to do so.

TABLE C.—MARRIAGE AGES OF BACHELORS IN DIFFERENT OCCUPATIONS, 1884–85.

AGES.	Miners.	Textile Factory Hands.	Labourers.	Artisans.	Shoemakers and Tailors.	Shopkeepers and Shopmen.	Commercial Clerks.	Farmers and Farmers' Sons.	Professional and Independent Class.	All Males. (1885.)
ALL AGES -	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000
Under age - -	169	144	121	109	172	55	27	31	7	86
21–25 - - -	535	558	455	489	477	412	432	253	144	455
25–30 - - -	228	205	277	278	232	323	379	349	376	306
30–35 - - -	47	58	88	73	76	128	130	217	272	95
35–40 - - -	14	16	29	25	23	53	13	75	98	33
40–45 - - -	6	12	18	17	6	19	11	47	43	14
45–50 - - -	—	5	7	4	8	6	6	14	26	6
50 and upwards -	1	2	5	5	6	4	2	14	34	5

The ages, though only given in the Table by quinquennia, were abstracted by single years; and it was found that the year of life in which the largest number of marriages occur among miners, textile factory hands, labourers, and artisans is the 22nd year of life; that is to say, they marry as soon as they are of legal age and can dispense with their parents' consent. After this year of maximum the proportion of marriages in these groups declines very rapidly year by year. In the other groups the year of maximum falls somewhat later, being latest of all in the professional and independent class, where it occurs in the 28th year, and the fall from the maximum in after years is much more gradual. The mean age at marriage in the several groups was as follows:—

Miners	23·56 years.
Textile hands	23·88 „
Shoemakers and Tailors	24·42 „
Artisans	24·85 „
Labourers	25·06 „
Commercial Clerks	25·75 „
Shopkeepers, Shopmen	26·17 „
Farmers and Sons	28·73 „
Professional and Independent class	30·72 „

As regards one of the groups, viz., the professional and independent class, some statistics exist for comparison with earlier periods. Mr. C. Ansell* made inquiry many years back into the mean age at marriage of bachelors in this class, and found it to be 29·95 for the period between 1840 and 1871, and gave reasons for believing that prior to this period the mean age had been lower. There are no available statistics as to the mean age in former periods of the other groups; but seeing that the mean age of bachelors generally at marriage has increased, and seeing that the bulk of the marriages are marriages of working men, we may assume with much certainty that in these classes also, low as the mean age at marriage still is, it is higher than it was farther back.

Signature in Marriage Register.—Of the men who married in the year, 10·7 per cent., and of the women 12·9 per cent., were unable to sign their names in the register; this gives a mean for the two sexes of 11·8 per cent. In 1870 the proportion was 23·6 per cent., or exactly double, and in 1855 it was 35·4, or exactly treble, the proportion in 1885; so that the illiterates have diminished 50 per cent. in the space of 15 years, and 67 per cent. in the space of 30 years. The improvement has been greater among the women than among the men; for thirty years back there were 140 illiterate brides to 100 illiterate bridegrooms, whereas in 1885 the proportion was only 121 to 100.

Certified Places of Worship.—The number of places of worship (not belonging to the Established Church) on 31st December 1885, certified under Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, was 24,075. During the year 755 new buildings were registered, while 118 were removed from the register by cancellation; the net increase during the year was therefore 637.

Buildings registered for the Solemnisation of Marriages.—The number of buildings registered for the solemnisation of marriages by other rites than those of the Established Church, standing on the register at the end of 1885, was 9593 (Table 11), showing an increase of 216 during the year.

* Statistics of Families in the Upper and Professional Classes, p. 44.

Births.

The births registered in the year numbered 894,270, and were in the proportion of 32·5 to 1000 persons living. This is the lowest birth-rate recorded since 1848, when the rate was 32·4. With the exception of an insignificant rise in 1884, the rate has fallen continuously year by year since 1876. (Table 2.)

The rate varied from 27·3 in North Wales, 27·5 in Herefordshire, and 27·6 in Sussex, to 36·4 in Staffordshire, 36·6 in Monmouthshire, 36·7 in Durham, and 36·9 in Nottinghamshire. (Table 14.)

Sex.—The male births numbered 455,809, and the female births numbered 438,461, the former being to the latter in the proportion of 1040 to 1000, the mean proportion having been 1038 to 1000 in the previous ten years. (Table 16.)

Illegitimate Births.—The infants registered in the year as born out of wedlock numbered 42,793, and were in the proportion of 1·56 per 1000 persons living. This is the lowest illegitimate birth-rate as yet recorded (Table 13), and is the more satisfactory as the long continued fall in the marriage-rate might have been expected to lead to a contrary result. The proportion of illegitimate to total births in England and Wales was 4·8 to 100, but was as high as 6·9 in North Wales, 7·0 in Norfolk, 7·5 in Cumberland, 7·7 in Herefordshire, and 9·1 in Shropshire. (Table 15.) Thus, while in round numbers one in twenty-one infants born in the whole country was born out of wedlock, the proportion in Shropshire was one in eleven. This county always shows an unhappy pre-eminence in the proportion of illegitimate to total births, but this proportion of one to eleven is higher than any registered in the ten preceding years (1875–84) either in that or in any other county. (Table 15.)

Deaths.

The deaths registered in the year numbered 522,750, and were in the proportion of 19·0 to 1000 persons living. Only once previously had a death-rate so low as this been recorded, namely in 1881, when the rate was 18·9.

This was the fifth consecutive year in which the death-rate did not exceed 19·6, the lowest death-rate recorded in any year previously to this quinquennium having been 20·3. (Table 2.) The mean rate in the whole quinquennium, 1881–5, was only 19·3; a further and considerable step in the continuous decline of mortality shown in the successive quinquennia since 1861–5. (Table 3).

The rate varied very greatly in different parts of the country, and ranged from 15·6 in Sussex, 16·1 in Surrey (extra Met.) and 16·5 in Lincolnshire, to 20·0 in South Wales, 20·7 in Monmouthshire, 21·2 in Lancashire, and 21·6 in Northumberland. The rate was somewhat above the average of the ten preceding years in Kent (extra Met.), Oxfordshire, Bedfordshire, Essex, Dorsetshire, Devonshire, Somersetshire, and Northumberland, while in Hertfordshire and in Westmorland the mortality tallied with the average; but in each of the other registration counties it showed a decline. (Table 22.)

Sex.—The decline of mortality was common to both sexes, for both the male and the female rates were the lowest on record, excepting in the one year 1881. The male rate was 20·05 and the female rate 18·02 per 1,000, giving for equal numbers living 1113 male deaths to 1000 female deaths. The proportion was rather more favourable to the male sex than had been the case since 1866. (Table 17.)

Ages.—The decline of mortality in 1885 was confined to the earlier life-periods. The death-rates for each life-period under 45 years of age were, both for males and females, not only below the average, but, with trifling exceptions, the lowest ever recorded; but for each life-period after this age, with few exceptions, both the male and the female rates were above the average.

If, however, instead of the single year 1885, the entire quinquennium, of which it was the ending, be taken, it is found (Table 21) that the death-rates, both male and female, at each age-period, were lower than in either of the two immediately preceding quinquennia 1871–5 and 1876–80.

Infant mortality.—The deaths of infants under one year of age numbered 123,130, and were in the proportion of 138 to 1000 registered births, the mean proportion for the ten preceding years having been 144. The infantile death-rate is largely determined by the amount of summer diarrhœa, and, as will be seen later on, 1885 was a year of very low diarrhœa mortality.

The rate ranged in the registration counties from 99 in Dorsetshire, 102 in Sussex, and 103 in Hertfordshire and in Wiltshire, to 151 in Leicestershire, 152 in Staffordshire, 153 in Durham, and 158 in Lancashire. The only registration counties in which the rate was above the average of the ten preceding years were Essex, Somersetshire, Cheshire, Northumberland, Westmorland, Monmouthshire, and South Wales.

Centenarians.—Among the deaths were 63 of reputed centenarians, 19 of whom were males and 44 were females. (Table 45.)

Urban and Rural Mortality.—The death-rate in the urban population (Table 43) was 20·0 per 1000, and the lowest on record; while the death-rate in the rural population was 17·5 per 1000, a rate slightly higher than that of the preceding year 1884, as also than the rates of 1881 and 1882. The urban districts appear to be improving somewhat more rapidly than the rural districts; for the mean urban death-rate in the quinquennium 1881–5 was 11 per cent. below the mean urban rate in the previous decennium; while the fall in the rural death-rate was only 9 per cent.

Registered Causes of Death.

The assigned causes of death were distributed as follows in the several classes :—

Table D.—Mortality from the several Classes of Diseases.

Causes of Death.	Total Deaths in 1885.	Rate per Million living.					
		1885.	1884.	1883.	1882.	1881.	Mean 1871-80.
Zymotic diseases	68,972	2,507	3,101	2,639	3,088	2,660	3,727
Parasitic diseases	829	30	38	39	37	39	57
Dietetic diseases	1,622	59	58	66	68	65	63
Constitutional diseases	90,083	3,276	3,413	3,407	3,395	3,328	3,597
Developmental diseases	43,924	1,598	1,578	1,632	1,558	1,583	1,676
Local diseases	272,415	9,908	9,567	9,890	9,591	9,348	9,928
Violence	17,268	625	652	675	669	697	737
Ill-defined and not specified causes	27,637	1,007	1,157	1,188	1,154	1,160	1,611
All causes	532,750	19,018	19,564	19,536	19,560	18,880	21,396

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of diseases were 68,972, and in the proportion of 2507 to a million persons living, a proportion, as shown in Table D., lower than in any preceding year of the current decennium, and no less than 32·7 per cent. lower than the mean in the last completed decennium.

The deaths from *small-pox* were 103 per million living; a rate, owing to an outbreak in London, considerably higher than in any of the three immediately preceding years. Taking, however, the whole quinquennium, 1881–85, the rate was only 78 per million, and the same as in the next preceding quinquennium, 1876–80. It will be seen, on examining Table 27, how greatly this rate was below that of any earlier quinquennium.

The mortality from *measles* was exceptionally high, being in the proportion of 526 to a million living. Twice only in the course of 25 years had this rate been exceeded, namely in 1863 and 1868, when the rates were 550 and 539; though twice also it had been nearly equalled, viz., in 1866 and 1874, when the rates per million were 511 and 517. It was in the northern counties, Durham, Northumberland, Cheshire, Lancashire, and Cumberland that the greatest excess of mortality occurred; the rate, however, was also very high in South Wales, Monmouthshire, and Somersetshire; as also in London. On the other hand the mortality was very low in the counties on the eastern side, viz., the East Riding, Lincolnshire with Rutlandshire, Norfolk, and Suffolk; as also in some scattered counties, as Cornwall, Shropshire, and Worcestershire.

The mortality from *scarlet fever* was extraordinarily low, being in the proportion of only 231 to a million living, whereas the lowest previous rate, that of 1884, was 400 per million; so that the rate in 1885 was no less than 42 per cent. below any previously recorded. The rate was 753 per million in 1878, and has fallen year by year without interruption since that date. Though the mortality from this disease habitually shows great fluctuations from year to year, there is nothing in our records (Table 26) to parallel this long continued decline. It cannot be concluded with certainty that the remarkable diminution of scarlet fever mortality implies a correspondingly diminished prevalence of that disease; for medical authorities are agreed that there is probably no disease, the severity of which varies from time to time so much as does that of scarlatina, the proportion of cases that prove fatal varying enormously in different epidemics; and it may therefore not impossibly be that the diminished mortality of recent years corresponds rather to an increased mildness of type than to a diminished prevalence. Nor is this question without statistical importance. For if the diminished mortality be due to diminished prevalence, there must be at the present time an abnormal accumulation of unprotected children in the population, and consequently a probability hereafter of a period of excessively high mortality; whereas if the diminution be due simply to mildness of type, no such anticipation need be entertained, inasmuch as a mild attack is believed to confer as perfect after-immunity as does a more severe attack.

To examine this question satisfactorily, very much more extensive data would be required than are procurable. Some evidence, however, may be obtained by examination of the Annual Reports of the Fever and Metropolitan Asylum Hospitals. From these it appears that the severity of scarlet fever, as measured by the proportion of deaths to cases, has been exceptionally low in the last few years. Of 9267 cases dealt with in 1875-80, there died 1113, or 120 per thousand; while of 11,544 cases dealt with in 1881–5 there died 1108, or only 96 per thousand. Moreover, the case-mortality was much the lowest in the year 1885, when only 81 per thousand died. It appears probable, therefore, that part of the decline in the scarlet fever death-rate was due to the epidemic being of milder type; but at the same time it also appears that the fall in the death-rate

cannot be entirely thus explained; for while the death-rate, that is the proportion of deaths to population, fell in the interval between 1878 and 1885 by 69 per cent., the proportion of deaths to cases only fell in the same period by 39 per cent., having been 133 per 1000 in 1878 and 81 per 1000 in 1885. The conclusion then from such evidence as can be procured is that the striking decline of scarlet fever mortality in 1885 was due in part to diminished prevalence of that disease, and in part to its having assumed a milder form. If the case-mortality in the whole country was the same as in the institutions above referred to, then the total number of cases of scarlet fever in England and Wales in 1885 was 78,427, or 2852 per million living; while in 1878 it was 141,738, or 5662 per million living. These estimates of course only include cases of similar average severity to those sent into hospital, and are exclusive of the vast number of cases in which the fever is so slight as scarcely to deserve the name of illness.

The mortality from *enteric fever* was in the proportion of 173 deaths to a million living, the lowest previous proportion having been 212, which was recorded in 1881. Thus the death-rate from this disease was 18 per cent. lower than in any previous year, while it was 35 per cent. lower than the mean rate for the ten immediately preceding years 1875–84. Nor can this decline be attributed to any transference of cases to the headings *typhus* or *simple and ill-defined fevers;* for the mortality under these two headings was also at its minimum, the proportion of deaths to a million living having been 12 for the former and 24 for the latter. Some part of the apparent decline may probably be attributed, as was stated in the last Annual Report, to improved statement of causes, and especially of the causes to which the very young or the very old succumb; but after the fullest allowance is made for such a possibility, the diminution of mortality from the several kinds of continued fever cannot but have been enormous.

Tested by the same method as was applied above to scarlet fever, namely the proportion of deaths to cases in the public hospitals of London, the decline in the mortality from enteric fever is found not to be attributable to this disease having assumed a milder form, for the case-mortality has remained unaltered, having been 180 per 1000 both in 1875–80 and in 1881–5; the decline, therefore, must be due to diminished prevalence, the result doubtlessly of sanitary measures.

The mortality from *whooping-cough* fell from a decennial average of 504 per million to 477, a decline of 5 per cent.; while the deaths from *diphtheria* were considerably above the average, being 163 per million, and 19 per cent. above the mean for the previous decennium.

The mortality from *diarrhœa* and *dysentery* was in the proportion of 487 to a million living, and the lowest in the past 25 years (Table 26), with the single exception of 1879, when the rate was 452 per million. The mean temperature at Greenwich of the summer months was exceptionally low in 1879, and, though not so low in 1885, was nevertheless below the average, and especially so in the months of August and September. In the 25 years, 1861–85, there were eight years with a mean summer temperature below the 100 years average; the mean of the annual diarrhœa rates in these eight years was 659 per million living, while the mean of the rates in the remaining 17 years was 992 per million.

The deaths ascribed to *hydrophobia* were 60, and more numerous than in any previous year with the exceptions of 1874 and 1877, when the numbers were respectively 61 and 79. (*See* Table 25). Considerable alarm was excited among the general public by the increased frequency of this disease; and, as at the same time much attention was directed to it in consequence of the experiments being made by M. Pasteur in Paris as to its prevention, it has been thought well to collect all such statistics concerning the disease as are derivable from our official records.

In the course of the 38 years, 1848–85, 939 deaths were registered in England and Wales as due to hydrophobia, being on an average something under 25 a year. The number rose to 61 in 1874, and to 79 in 1877, but even these highest numbers only gave rates of 2·57 and 3·20 per million of the living population; so that the indisputable amount of apprehension as regards this disease is quite disproportionate to the risk of its occurrence. The risk of death from murder or homicide is many times as great as the risk of death from hydrophobia.

The 939 deaths were distributed by age and sex in the following manner.

TABLE E.—DEATHS from HYDROPHOBIA, 1848–1885.

SEX.	ALL AGES.	0–	5–	10–	15–	20–	25–	35–	45–	55–	65–	75 and upwds.
Males	734	81	123	100	63	69	110	84	49	34	19	2
Females	205	37	44	34	11	9	17	11	21	16	4	1
Persons	939	118	167	134	74	78	127	95	70	50	23	3

The numbers are too small to supply a sure basis for the calculation of precise rates; they are, however, sufficient to show that hydrophobia is proportionately much more frequent among children under 15 years of age than among adults, and from three to four times more frequent among males than among females. The disproportionate frequency in the two sexes is strongly marked at all ages, but is very much more decided in adult life than in childhood. All these features in the table are plainly referable to one cause, namely, difference of liability to dangerous bites from dogs. Males have more to do with dogs than have females; children play with them more than adults, and moreover from their stature and dress are more likely, if bitten, to be bitten on the face or naked parts of the body. Lastly the differences in these respects between the sexes are less marked among children than among adults.

In most of the cases of hydrophobia, either no statement at all is to be found in the death-certificate as to the date of the bite to which the death was due, or the interval between bite and death is only stated in round, and therefore comparatively untrustworthy, numbers; but in 132 cases the exact day on which the deceased was bitten was stated as well as the day of death. Of these 132 cases the number bitten in each month of the year was as follows:—

January	10	July	21
February	6	August	17
March	12	September	13
April	5	October	7
May	9	November	11
June	10	December	11

The cases thus distributed are too few to justify any positive inferences as to the comparative prevalence of rabies at different times of the year. So far, however, as the figures go, they favour the popular and ancient belief that rabies in dogs is more common in the summer than in other seasons; a belief which, though not universally* accepted by writers on the subject, is nevertheless in accordance with the statistical results obtained in France (1850–72) by examination of 684 cases, and in Milan by examination of 113† cases.

* Cf. Fleming, Rabies and Hydrophobia, p. 99.
† Cf. Dict. Encycl. des Sc. Médic., ii., 201.

The interval between bite and death varied very greatly; as is shown in the following summary, in which the cases are distributed according to the length of the interval, stated in months of 30 days each.

0—1 months	23 cases.
1—2 „	64 „
2—3 „	21 „
3—4 „	11 „
4—5 „	5 „
5—6 „	1 „
8—9 „	1 „
9—10 „	1 „
1 to 2 years	3 „
3 to 4 years	1 „
Over 4 years	1 „

It appears, therefore, that by far the most usual interval is from one to two months, and that in no less than 108, or 82 per cent., of the 132 cases; the interval was under three months. The shortest interval was 12 days; this was in the case of a little girl who had been bitten by a cat. Possibly the unusual shortness of the interval may be related to the kind of animal that inflicted the bite, just as the interval is known to be shorter after a bite from a wolf; but it must also be stated that among the cases is another that was caused by a cat's bite, and that here the interval was as much as 68 days.

Moreover, the bite of a cat, and especially when it is a child that is bitten, is almost certain to be a bite on the face or some naked part of the body, and there is some reason to believe that the incubation is shorter in such cases.*

In no less than five cases the interval was over a year, and in one of these instances the period exceeded three and in another exceeded four years. Although all writers on hydrophobia quote records of similar instances of reputed prolonged incubation, they are, as a rule, inclined to reject them as mythical, or to explain them by supposing that the deceased had been bitten a second time at a shorter interval, and had forgotten the circumstance. Such of course may have been the case; but it seems highly improbable that in 5 out of 132 cases of fatal hydrophobia, the patient should have been bitten twice at far removed intervals, and should have remembered the more remote and forgotten the more recent occasion; nor does there seem to be any analogy from the observed phenomena of other infectious diseases, or any knowledge as to the exact pathological processes in hydrophobia itself, which would make an incubation of four years one bit more mysterious than an incubation of four months, which no one disputes.

The period of incubation does not apparently depend on the condition of the dog that inflicts the bite; for among the 132 cases were two of girls, aged 3 and 5, bitten in the same village and on the same day, presumably therefore by the same dog; of these the younger one died after an interval of 44 days, but the other after an interval of 31 days.

It is a very generally accepted opinion that the length of the incubation period is determined in some measure by age, being shorter in young subjects than in adults. Table F. has been constructed in order to show how far our records tally with this view. In this table the cases are classed by ages and sexes, and the exact period of incubation is stated for each case in days. It will be seen that within the limits of a single age-period the incubation-period varies very widely indeed, and when this fact, as also the comparatively small number of cases at each age-period, is taken into account, it will be sufficiently apparent how rash it would be to draw

* Cf. Dict. Encycl. des Sc. Médic., ii., 205.

conclusions from averages based on such scanty and such variable data. The facts recorded in the table must therefore be looked on as a mere contribution towards the very much wider collection of facts required before any trustworthy inference can be made. Taking them, however, as they stand, they do tally with the accepted opinion; for the mean of the incubation period among children under 5 years of age is 40 days, among those over 5 but under 15 is 70 days, and among the cases at ages above 15 is 118 days.

The mean at all ages is 86 days; being for the male cases 88 and for the female 83 days.

TABLE F.—AGE, SEX, and INCUBATION-PERIOD (in days) in 132 FATAL CASES OF HYDROPHOBIA.

Ages.	Males.	Females.
0—5 - -	70, 64, 52, 48, 46, 44, 43, 40, 35, 35, 34, 33, 32, 30, 19.	58, 58, 52, 44, 29, 28, 18, 12.
5—15 - -	167, 134, 130, 110, 77, 71, 68, 68, 65, 59, 57, 56, 54, 54, 53, 52, 51, 47, 46, 44, 39, 38, 35, 35, 33, 29, 28, 27, 27, 25, 25, 23, 21, 20, 20.	494, 374, 100, 85, 84, 71, 67, 67, 57, 54, 39, 32, 31, 26, 15.
15—25 - -	1185, 275, 140, 115, 97, 92, 78, 68, 60, 57, 31.	34, 28.
25—45 - -	1532, 104, 97, 94, 69, 67, 63, 60, 57, 55, 47, 45, 44, 43, 42, 38, 38, 37, 35, 33, 31, 30, 24, 19.	134, 123, 83, 63.
45 and over -	412, 98, 78, 72, 59, 54, 52, 49, 44, 42, 40.	248, 114, 102, 53, 42, 34, 18.

There is one other feature in this disease as to which our records give some information, namely, the duration of the fatal attack, that is to say, the period between the appearance of first symptoms and death. This was stated in 170 cases, and the deaths occurred as follows:—

On 1st day in 8 cases.	On 7th day in 9 cases.
„ 2nd „ 8 „	„ 8th „ 5 „
„ 3rd „ 28 „	„ 9th „ 1 „
„ 4th „ 51 „	„ 10th „ 1 „
„ 5th „ 41 „	„ 12th „ 1 „
„ 6th „ 17 „	

Parasitic Diseases.—The deaths in this class were 829, and in the proportion of 30 to a million living, showing a further decline from the previously reduced mortality, owing to an increasing disuse of the unsatisfactory term "thrush" as a cause of infantile deaths.

Dietetic Diseases.—The deaths in this class were 59 per million living, and, owing to the diminution of deaths from starvation and from scurvy, somewhat below the average. Under the numerically most important heading in the group, viz., alcoholism, there was no reduction. The rate from this cause was 48 per million, and exactly equal to the average of the four preceding years.

Constitutional Diseases.—The deaths in this class were 3276 per million living, and not only considerably below the average, but lower than in any

earlier year. The decline was entirely due to diminished mortality from *Phthisis* and from other *Tubercular and Scrofulous Diseases.* The death-rate under each of these two headings was at its minimum; the rate for the two together was 2406 per million, and 5 per cent. below the previous minimum, which was 2530 recorded in 1881.

The mortality from *Rheumatic Fever*, including such cases of diseased heart as were stated to have originated in that affection, and from *Rheumatism* were 138 per million living, a proportion scarcely differing from those of recent years. It will be seen in Table 27 that the mortality from these rheumatic affections increased progressively in each successive quinquennium included in that table up to 1876–80, when the mean annual death-rate from them was 139·2 per million; but in the next quinquennium, which terminated in 1885, this continuous rise in the rate was arrested, and the mean for the five years fell to 131·8. The deaths from *Cancer* were 566 per million living, and showed a further slight rise upon the steadily increasing mortality of previous years.

The only other ailment in this class for which rates are given in Tables 26 and 27 is *Diabetes Mellitus.* The deaths from this disease are comparatively not very numerous, being only in the proportion of 55 to a million living. This proportion, however, is double that recorded in the earliest years, 1862–3, included in the table; and in view of the continuous though slight increase that has now for years been taking place under this heading, it has been thought well to examine the statistics of this disease in some detail.

In the thirty years, 1856–1885, 25,100 deaths from diabetes mellitus were registered in England and Wales. These deaths, distributed by ages and sexes, give the rates per million living shown in the following Table.

TABLE G.—MEAN ANNUAL MORTALITY per MILLION LIVING from DIABETES MELLITUS, among MALES and FEMALES, 1856–1885.

AGES.	ANNUAL DEATHS PER MILLION LIVING.		Proportion of Male to Female rate. (Female rate taken as 100.)
	Males.	Females.	
All Ages - -	**48**	**26**	**185**
0–5	2	2	100
5–10	5	4	125
10–15	11	10	110
15–20	23	15	153
20–25	29	17	171
25–35	47	26	181
35–45	63	35	180
45–55	95	48	198
55–65	168	81	207
65–75	229	95	241
75–85	171	70	244
85 and upwds.	78	33	236

It will be noted, firstly, that the rates increase uninterruptedly in each sex with the advance of life until the 65–75 years period is reached, when the rates are at their maxima,—229 per million for males and 95 per million for females,—and that after that age they again decline.

Secondly, it will be observed that the male mortality, excepting among infants under 5 years of age, is always greatly in excess of the female mortality; and that this difference between the sexes in their liabilities to fatal diabetes increases with the advance of age, as is shown in the last column of the table, where the proportion borne by the male to the female rate at each age-period is given, the female rates being taken as 100.

The male rate at all ages, as given in the table, is 48 per million, and the female rate 26 per million; but these rates require correction for differences of age-distribution in the two sexes; for there is a much larger proportion of aged persons—namely of persons specially liable to diabetes—in the female than in the male population. The female rate, were the age-distribution of that sex identical with the age-distribution of males, would be 25. The figures 48 and 25 therefore represent the comparative liabilities of the two sexes to diabetes.

Seeing how few, comparatively speaking, are the annual deaths from diabetes in proportion to the population, it becomes necessary, in any attempt to examine into the geographical distribution of this disease within the limits of this country, to take larger areas than counties as the geographical units, and to base the inquiry upon a considerable number of years. In the following account, therefore, the eleven registration divisions and the mortality of 30 years (1856–85) have been taken as a basis. Again, seeing how largely the diabetes mortality depends upon age and sex, and seeing how considerably the age and sex distribution of the inhabitants often differs in different areas, in any accurate investigation it will not suffice to take simply the proportions of deaths from diabetes to the total populations in the several areas, and put these into comparison with each other, but due correction must be made, as was done in the last Annual Report in the case of Cancer, for differences of age and sex distribution.

A correction for sex is easily made; namely, by calculating the male and female rates separately and taking the mean of the two. This, of course, gives for each area a rate for a population consisting half of males and half of females. But the requisite correction for age-distribution cannot unfortunately be carried out in the case of diabetes; because the deaths from this disease in single registration divisions, when divided out to the several age-periods, are too few to supply a sufficiently large basis for the safe calculation of rates. This flaw in the investigation would be much more serious, were counties and not divisions taken as the geographical units, inasmuch as the differences of age-distribution are much greater in the populations of the smaller than of the larger areas. Still even in the eleven divisions considerable differences exist, though probably not such as to affect very seriously the results of uncorrected comparison. The rates, then, in the following table are corrected for differences of sex-distribution, but not for differences of age-distribution.

TABLE H.—MEAN ANNUAL MORTALITY PER MILLION* FROM DIABETES, 1856-85.

Division.†	Males.	Females.	Mean of Male and Female Rates.
Eastern	58·8	35·5	47·15
North-Midland	56·8	30·8	43·80
Yorkshire	55·0	28·7	41·85

* The populations used for calculating the rates in this table were the enumerated populations in the year 1871, as being practically the middle of the period 1856–85.

† For the names of counties included in each Division, *see* p. xxxviii.

The differences shown in this table between the several divisions are very considerable, and that the figures represent not merely accidental fluctuations but real differences in the liability to diabetes, is rendered the more probable, inasmuch as there is a very close parallelism observable between the male and the female rates. For in every one of the divisions in which the male rate is above the average so also is the female rate; while in those divisions in which the contrary is the case and the male rate is below the average, so also, with one exception, is the female rate. The exception, moreover, viz., the London division, is neither a very striking one nor one incapable of rational explanation; for, though the female rate in this division is above the average, it is only very slightly so; and this slight excess would very probably disappear, were correction made for age-distribution; for in London the proportion of aged females, that is of females of the ages most liable to diabetes, is in considerable excess.

The divisions are arranged in the table in the order of mean mortality. In the four that head the list, and especially in the first two of them, the mortality is in very considerable excess; these are the four divisions that abut on the eastern coast, without also abutting on the western coast. There are four other divisions that abut on the western coast; these four come at the bottom of the list and have the lowest diabetes mortality. Finally there are three divisions that are purely inland, and in these three divisions the mortality is intermediate, scarcely departing from the average. This definite geographical distribution of diabetic mortality is certainly most curious, and its regularity is such as can scarcely be accidental. What may be the explanation is a question for pathologists. It may, however, be pointed out that there is apparently a remarkable inverse relation between the amount of diabetes and the amount of rainfall. Possibly this may be no more than a chance coincidence. But if any one take the trouble to compare a hyetological * map with a diabetes map drawn from the data in Table H., he will see that the four divisions on the western coast in which the diabetes mortality is the lowest, the rates averaging only 30·80, are also the four divisions in which the rain-fall is highest; further that the two divisions on the eastern coast in which the diabetes mortality is highest, the rate averaging 45·48, are apparently the two divisions with the least rain-fall; and finally that the remaining divisions, in which the

* Such a Map for instance as is given in Huxley's Physiography, p. 48.

mortality is intermediate, and the rates average 38·78, have also an intermediate rain-fall. It would be of much interest to know whether any similar relation between rain-fall and diabetes is observable in other countries. Confining ourselves, however, to the United Kingdom, it appears that the mean annual mortality from diabetes in England and Wales (1874–83) is 26 per cent. above that of Scotland, and 40 per cent. above that of Ireland,* and these facts, so far as they go, tally with the hypothesis; for both in Scotland and in Ireland the rain-fall is much in excess of that of England.

It is held by some authorities† that the distribution of diabetes is mainly determined by the amount of cold and wet, and by the prevalence of agricultural pursuits, as representing exposure to these influences. This opinion is based on the mortality in counties for ten years, 1861–70. But the deaths in counties from this disease in ten years, or even in thirty years, are too few to give a sure basis; as is shown by the fact that when the male and female rates are calculated separately on such a basis, there is not found to be any due correspondence between the two series of rates, such as exists when larger areas are taken. Moreover, as previously noted, correction for differences of age-distribution is much more essential in small than in large populations. It is quite possible, for instance, that the low figures for Durham (Table I.) may be in great measure due to the large proportion of young persons in the population of that county. Much reserve, therefore, is advisable in drawing inferences as to the geographical distribution of diabetes from the county figures. These are, however, given for what they are worth in the following Table (*see next page*), in which the counties are arranged in the order of mean mortality.

Developmental diseases.—The deaths of infants from *Premature Birth* numbered 12,904, and were in the proportion of 1443 deaths to 100,000 live births; the proportion had been almost exactly the same in each of the two immediately preceding years, but was higher than the previous average. The deaths from various *Congenital Malformations* were 341 per 100,000 births, being a higher proportion than in any previous year. Under both these headings there has been a gradual increase for many years past. The deaths ascribed to *Old Age* on the other hand have been gradually decreasing in proportion to the population, owing to better statement of causes; but in 1885 the proportion was slightly higher than the average of the four immediately preceding years, owing probably to the more than average cold weather in the winter months, to which also, as will be noted presently, is to be ascribed the rise of mortality from diseases of the respiratory and the circulatory systems.

Local Diseases.—The deaths in this great class were 9,908 per million living, a proportion somewhat higher than in any of the four preceding years, but scarcely differing from the earlier average. Among the many groups, however, comprised in the class was one in which a very considerable increase of mortality was registered, namely, *Diseases of the Circulatory System.* The mortality under this heading has been increasing steadily for many years past (Table 26), and in 1885 reached 1597 per million living, the highest previous rate having been 1513, which was recorded in 1879. The mortality was also high, 3853 per million, from *Diseases of the Respiratory System.* This high rate was doubtlessly attributable to the cold weather that prevailed during the months of March, October, and December. In no other group comprised in the class of Local Diseases did the mortality depart in any material degree from the average of recent years.

* The mean of the annual deaths from diabetes per million persons in 1874–83 was for England and Wales 42, for Scotland 31, and for Ireland 25.

† Cf. Dickinson, Diabetes, pp. 72 and 80.

TABLE I.—MEAN ANNUAL MORTALITY PER MILLION LIVING from DIABETES in REGISTRATION COUNTIES, 1856–85.

COUNTY.	Males.	Females.	Mean.
Norfolk	75·3	38·0	56·65
Berkshire	67·9	41·1	54·50
Suffolk	61·1	37·3	49·20
Derbyshire	63·6	32·5	48·05
Sussex	58·1	37·8	47·95

Herefordshire	33·2	21·5	27·35
North Wales	36·2	17·3	26·75
Durham	32·6	19·0	25·80
Monmouthshire	32·5	16·1	24·30
South Wales	27·0	15·5	21·25

Violent Deaths.—The deaths ascribed to some or other kind of violence were 17,268 in number, and in the proportion of 625 to a million living. This is the lowest rate recorded in any year. The fall was mainly in the deaths from accident, but the deaths from homicide were also at their minimum; and the mortality from suicide, which had been gradually increasing in recent years, was lower than in any year since 1878. Thirteen murderers, all males, died at the hands of the executioner.

Ill-defined and not-specified Causes.—In 27,637 cases, or in 5·3 per cent. of the whole, the cause of death was stated so inadequately as to be insufficient for satisfactory classification. In the great bulk of these cases the cause assigned was Debility, a condition accompanying most fatal diseases, and probably meaning, when given by itself as a cause of death, that the medical attendant had not ascertained what was the real malady. Other headings in this class are Tumour, Abscess, Hæmorrhage, &c. without further specification of organ or character, Sudden Death, and lastly Dropsy, without distinction of cause. Great efforts have been made by means of letters of inquiry to diminish the number of these unsatisfactorily described cases, and some improvement, though scarcely adequate to the labour involved, has been the result. The deaths under the heading "Dropsy" especially have been reduced; in 1885 there were only 418 deaths thus classified, whereas only a few years back the number under this heading was over 2000; but this improvement involved sending out in the year more than 1000 letters of inquiry to medical men who had neglected to state the cause of the dropsy, though, as the answers showed, in the vast majority of the cases they knew what this cause was.

It is much to be desired that our medical authorities should impress the students who pass through their hands with the importance of so stating the cause of death in certificates, as may make these of use for the advancement of medical statistics, and should themselves set an unexceptionable example in this matter; the death certificates even from our great hospitals too often leave much to be desired.

Certification of the Causes of Death.—During the year 1885 the causes of 476,806 or 91·2 per cent. of the 522,750 deaths were certified by registered medical practitioners; while the causes of 27,798, or 5·3 per cent. were certified by coroners. The causes of the remaining 18,146 or 3·5 per cent. of the total deaths were not certified; the mean proportion in the six preceding years 1879–84 having been 4·1. The proportion of uncertified deaths varied very considerably in different parts of England and Wales. In the Metropolis the proportion did not exceed 1·1 per cent. Excluding the extra-metropolitan parts of Middlesex and Surrey, the percentage was 0·8 in Wiltshire, 1·6 in Sussex, 1·8 in Berkshire, Buckinghamshire, and Rutlandshire, and 1·9 in Monmouthshire; and ranged upwards to 5·8 in Durham, 5·9 in Cornwall, and 8·5 in Wales. Compared with the county per-centages in 1884, those in 1885 showed a very general decline; in Hampshire, in Worcestershire, and in Berkshire, however, the proportions showed an exceptional increase.

Progress of Registration.

During the year 1885 the number of names added to the printed alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales was 1,812,510. At the close of the year the aggregate number of names in these indexes, which on the 31st December 1885 embraced a period of 48½ years, was 72,104,452. The total number of searches in 1885 (including those in non-parochial and other records) was 35,693, showing an increase of 1,506 upon the number in the previous year; the number of certificates issued was 27,703, and 2·9

per cent. more than in 1884. The amount received as fees for searches and certificates in the year 1885 and paid into Her Majesty's Exchequer, was 5,317*l.* 13*s.* 6*d.* (Table 47).

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pp. xxi–xxii and xxv–xxvi.

Mortality in the Army.

From returns furnished by His Royal Highness, the Field-Marshal Commanding-in-Chief, it appears that the average strength of the Army, at home and abroad, was 198,064, and that the number of deaths was 2730, so that the rate of mortality was 13·8 per 1000, having been 8·8 and 9·8 in the two immediately preceding years.

The average strength of the Army at home was 91,579 and the deaths were 735; while the average strength abroad was 106,485 and the deaths 1995. The death-rate at home was therefore 8·03, and the death-rate abroad 18·74 per 1000. (Tables 51–55.)

Mortality in the Navy.*

The total force in the Service afloat, corrected for time, was 46,670 in 1885. The deaths were 329, being in the ratio of 7·04 per 1000. Of the 329 deaths, 223 were due to disease, and 106 to violence; so that the death-rate from disease was 4·77 and from violence 2·27 per 1000.

Of the 106 violent deaths, 38 were from accidental drowning, 31 from other accidental causes, 33 from wounds in action, and 4 from suicide.

The assigned causes of the 223 deaths from disease were as follow:—

		Diseases of—	
Continued fevers	44	Circulatory system	14
Paroxysmal fevers	17	Digestive system	26
Rheumatism	3	Respiratory system	33
Tubercular diseases	28	Urinary and generative systems	8
Diseases of nervous system	29	All other causes	21

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships not in Her Majesty's service, are required, under a penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrar-General of England, of Scotland, and of Ireland. Returns of a similar character are also received from the commanding officers of Her Majesty's ships. The certified copies of births and deaths thus received by me constitute the "Marine Register Book." During the year 1885 the entries recorded in this Register were 262 of births and 4057 of deaths. Of these 4057 deaths, 1710 were returned as of persons of English origin, while 630 were indefinitely returned as of persons of "British" origin; of the latter number it is impossible to estimate correctly the proportion belonging to England and Wales.

* The facts in this paragraph were supplied by the Director-General of the Medical Department of the Navy.

Among *passengers* on board merchant vessels at sea (Table 57), 141 births and 598 deaths were reported in 1885; each of these numbers showed a considerable decline from the numbers in recent years.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports (Table 58), that the number of merchant seamen at sea in registered vessels during 1884 was 199,654, showing a slight decline from the number in the previous year. The reported deaths from all causes among these merchant seamen during the year 1884 were 3757, and give an annual rate of 18·8 per 1000 of the strength; this rate was 2·5 below the mean annual rate during the 33 years 1852–84. The number of seamen afloat in 1885 was 198,781, showing a further decline from the numbers in the two preceeding years, but the return of deaths in that year is not yet completed.

International Vital Statistics.

In Tables 68–84 will be found international vital statistics relating to 12 of the principal European States, in addition to the United Kingdom, published in accordance with a resolution of the Statistical Congress held at St. Petersburgh in 1872. Table 68 affords the means for comparing the marriage, birth, and death-rates in each State in a series of years, with the mean rate during the period 1861–80. Tables 69–84 give detailed statistics for the several parts of the United Kingdom, and for the 12 European States.

The *marriage-rates* showed in 1885 a slight further recovery in the German Empire and in Sweden, whereas in most of the other European States they were still further depressed. The rates in the countries furnishing returns ranged from 8·6 and 12·2 in Ireland and the Netherlands, to 15·2 in Austria, and 15·8 in the German Empire and in Italy.

The *birth-rates* showed a very general decline, and ranged from 23·5 and 24·3 in Ireland and France, to 37·1 in the German Empire, 37·4 in Austria, and 38·1 in Italy.

The *death-rates* in 1885 did not materially differ from those recorded in the previous year; those in Ireland, Austria, Prussia, and Switzerland, however, showed a slight increase, while in the other countries they were slightly lower. The rates in the countries furnishing returns ranged from 16·4 and 17·8 in Norway and Sweden, to 25·7 in the German Empire, 26·6 in Italy, and 29·9 in Austria. The mean death-rate in the ten Continental States furnishing returns was 24·7, and exceeded the rate in the United Kingdom by no less than 5·8 per 1000.

I have the honour to be,
Sir,
Your faithful Servant,
BRYDGES P. HENNIKER,
Registrar-General.

Remarks on the Meteorology of the Year 1885.

By James Glaisher, Esq., F.R.S., &c.

The following remarks with regard to atmospheric pressure or temperature are derived from observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The readings of the barometer were high during the first week in January, being 0·25 in. above the mean daily average, and were low in the second week, being 0·32 in. below the daily average; from the 15th to the 26th the average daily excess was 0·16 in.; from January 27th to March 9th, the readings were below the average with the exception of a very few days, the mean daily deficiency of pressure for these 42 days was 0·28 in.; from March 10th to the end of the month (with the exception of the five days ending the 22nd, which were slightly below the average), the mean daily excess of pressure for the 22 days ending March 31st was 0·2 in. The mean daily readings were below their averages from April 1st to May 23rd, the exceptions were April 2nd to 4th; April 17th to 21st, May 8th to 12th the average daily deficiency of pressure for the 53 days ending May 23rd was 0·16 in.; from May 24th to June 3rd there was a slight excess of pressure, and from this day the pressure was alternately a little above and a little below for a few days together to the end of June. From July 1st to August 5th the barometer readings were generally high, the mean daily excess of pressure for these 36 days was 0·19 in. From August 6th to August 25th there were a few days of slight excess, and then a few days of slight deficiency of atmospheric pressure; from August 26th to September 15th there was a deficiency of pressure to the amount of 0·24 in. daily. From September 16th to October 7th, the departures from the daily averages were slight, from October 8th to the 14th, the average daily deficiency was 0·32 in.; for the six days ending the 20th the daily excess was 0·20 in.: and then to the end of October the readings were low, the mean daily deficiency amounting to 0·37 in. From November 1st to the 20th the pressure was generally in excess of average by 0·15 in.; from the 21st to the end of the month the deficiency averaged 0·35 in. daily; from December 1st to 8th, there was first an excess and then a deficiency; from the 8th the readings were high till the 27th, being above their averages by 0·36 in. daily, and the mean daily deficiency for the last four days of the year was 0·10 in.

The highest reading of the barometer in the year at the height of 160 feet above the level of the sea was 30·46 in. on March 14th, and the lowest was 28·73 in. on January 11th; the yearly range was 1·73 in.

The month of January was dull with very little sunshine, and was cold till the 24th day, the mean daily deficiency of temperature was 2°·4 below the average of 60 years, a warm period set in on the 25th and continued to the end of February, the average daily excess of temperature was 4°·8. In February the weather was unsettled, with frequent rain. On March 1st a cold period set in and continued till the middle of April, the mean deficiency of daily temperature for the 47 days ending April 16th was 2½°, the weather during March and the first half of April was dry and cold; from April 17th to the end of the month the weather was warm, the average daily excess of temperature was 5°·1. It was cold in May till the 26th, the average daily deficiency of temperature was 4°·8, this was followed by 13 days of warm weather, the mean daily excess of temperature being 4°·3; from June 9 to the end of the month it was generally cold, the average daily deficiencies of temperature being 2½°. The weather in July was fine, the temperature on several days differed very little from its average, till the 27th day there

was an average daily excess of 1½°; from July 28th to September 2nd the weather was unsettled, the temperature being variable, and generally below its average, the mean temperature of the 37 days ending September 2nd was 3° below its average. The weather in September was unsettled, the temperature for four or five days together being a little above, and then for four or five days a little below the average to nearly the end of the month. From September 24th to November 24th, the weather was mostly wet and cold, the mean daily deficiency of temperature for the 62 days ending November 24th was 4°·1. The weather was warm from November 25th to December 4th, the excess of mean daily temperature being 4°·6, it was very cold from the 5th to the 13th the average daily deficiency being 7°·7, and from the 14th to the end of the year, the departure of temperature from its average was very small.

The highest temperatures of the air in the year were 94°·5 at Osborne, 94°·0 at Salisbury, and 91°·2 at Cardington, and the lowest were 11°·8 at Carlisle, 15° at Salisbury, and 16° at Barnet.

Rainfall.—The falls of rain were below their averages in January, somewhat above the average in February, and very near the average at all stations in March. The total falls in these three months at Greenwich was 5·26 in., being 0·26 in. below the average. The falls in both April and May were of very nearly the average, and June was generally a dry month. At Greenwich the total fall in these three months was 5·82 in., being very nearly the average. July was a dry month, at all our stations August was also a dry month, September was a wet month. At Greenwich the total fall for these three months was 5·55 ins., being 1·8 in. less than the average. October was a wet month, particularly in Norfolk, which is generally a relatively dry county. The fall in November was upon the whole about its average, and December was a dry month generally. At Greenwich the fall in the quarter was 7·37 ins., being 0·25 in. above the averages. The total fall of rain in the year was 24 ins., being 1·78 in. less than the average, and the number of days on which it fell was 166.

The heaviest falls of rain in the year at our stations were at Bolton 47·87 ins., Truro 44·59 ins., and Bath 44·46 ins.

The least falls were at Leeds 21·68 ins., Blackheath 22·87 ins., and Rodmersham 23·53 ins.

The greatest number of days of rain was 250 at Nottingham, 234 at Salisbury, and 218 at Guernsey and Burslem, and the smallest number of rainy days was 140 at Blackheath, 141 at Eastbourne, and 145 at Barnet.

Thunderstorms occurred on 48 days at the different stations during the year; of these 14 took place in May, 11 in September, 6 in June, 6 in August, 3 in January, 2 in February, 2 in October, 1 in each of the months of April, July, November, and December; in March no thunderstorm was reported.

Thunder was heard but lightning was not seen on 47 days during the year; of these, 16 were in May, 9 in September, 7 in August, 5 in April, 3 in February, 2 in July, 2 in October, 1 in each of the months of January, June, and December, and none in either March or November.

Lightning was seen but thunder was not heard on 44 days in the year; of these, 10 occurred in September, 10 in October, 5 in May, 5 in August, 3 in February, 3 in June, 3 in December, 2 in January, 2 in July, 1 in November, and none in either March or April.

Solar halos were seen on 87 days in the year; 12 in September, 11 in March, 10 in October, 8 in August, 7 in April, 7 in May, 7 in July, 7 in December, 6 in January, 5 in June, 4 in February, and 3 in November.

Lunar halos were seen on 39 nights in the year; there were 6 in September, 5 in January, 5 in April, 5 in October, 4 in February, 4 in November, 3 in March, 3 in December, 2 in May, 1 in each of the months July and August, and none in June.

Auroræ Boreales were seen on eight nights; at Stonyhurst on February 5th, at Torquay, Brighton, Leicester, and Halifax on March 15th, at Stonyhurst on May 14th, at Leicester on July 1st, at Leicester and Carlisle on July 21st, at Carlisle on the 22nd, and at Leicester and Carlisle on July 27th, and at Stonyhurst on September 11th.

Snow fell on 60 days during the year, 11 in January, 9 in February, 14 in March, 4 in April, and 6 in May, the day of last fall was May 10th, none fell in June, July, or August; the first fall in September was the 26th at Carlisle, it fell on 2 days in October, 1 in November, and on 12 days in December.

Hail fell on 94 days in the year, none fell in either June or July; it fell on 17 days in May and in October, on 10 days in January, 10 days in March, 10 days in September, 8 days in February, 7 days in April, 7 days in December, and 4 days in each of the months of August and November.

Fog was prevalent on 176 days in the year, on 21 days in December, 20 in each of the months January and November, 16 in each of the months of February, August, and September, 13 in each of the months of June, July, and October, 12 in April, and 8 in each of the months of March and May.

PRELIMINARY TABLES.

Table 1.—ENGLAND.—Population, Marriages, Births, and Deaths, 1838–85.

Year.	Estimated Population in the Middle of each Year.*	Marriages.	Persons Married.	Births (exclusive of Still-born).	Deaths	Excess of Births over Deaths.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027
1839	15,514,255	123,166	246,332	492,574	338,984	153,590
1840	15,730,813	122,665	245,330	502,303	359,687	142,616
1841	15,929,492	122,496	244,992	512,158	343,847	168,311
1842	16,130,326	118,825	237,650	517,739	349,519	168,220
1843	16,332,228	123,818	247,636	527,325	346,445	180,880
1844	16,535,174	132,249	264,498	540,763	356,933	183,830
1845	16,739,136	143,743	287,486	543,521	349,366	194,155

* Deaths from this cause prior to 1881 are included, partly with "Diseases of Respiratory System" and partly with "Ill-defined and not specified Causes."
† Deaths from these diseases prior to 1881 are included with "Other Tubercular and Scrofulous Diseases."
‡ Deaths from Addison's disease prior to 1864 are included with "Diseases of Urinary System."

TABLE 26.—ENGLAND.—**Death-rates from Various Causes to a Million Persons living, 1862–85.**

(Decimals are omitted, the nearest whole number being taken. When the Deaths from any Cause were too few to give a rate of 0·5, a cipher is inserted.)

* Wandsworth was not included in Registration London until 1844; Lewisham and Hampstead were not included until 1847; since that year the boundaries of Registration London have remained unchanged.

NOTE.—For the years 1838-50 the numbers of deaths from the various diseases are derived from summaries of 52 or 53 weeks; for years subsequent to 1850 they are derived from the Annual Reports, and relate to the calendar years.

* The prices of coal in 1853-81 are derived from a Parliamentary Return (No. 225, 1881) furnished by the Registrar of the London Coal Market, by order of the House of Commons: the quotations for 1882-5 are the means of the four quarterly averages. The quarterly averages were from time to time supplied to the Registrar-General by Mr. Richard Meade, of the Mineral Statistics Department, Home Office.

TABLE 67.—**Changes** in the **Constitution** of **Registration Districts** and **Sub-districts** during the Year **1885.**

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
		1885.	
15	KENSINGTON - -	1 January -	The civil parish of Paddington (*St. Mary Paddington* and *St. John Paddington* sub-districts, aggregate population 107,218) was constituted a Superintendent Registrar's district.
119	READING - -	1 February -	The sub-districts of *St. Lawrence* and *St. Giles* were united under the name of *St. Giles* (aggregate population 26,232).
148	AYLESBURY - -	1 October -	The sub-district of *Aylesbury* was dissolved: the parishes of Aston-Sandford, Dinton, Hartwell, and Stone (aggregate population 2,291) were added to the *Haddenham* sub-district: and the parish of Aylesbury (population 7,795) was added to *Aston Clinton* sub-district. The parish of Wingrave-with-Rowsham (population 903) was transferred from the *Aston Clinton* sub-district to the *Waddesdon* sub-district. The name of the *Aston Clinton* sub-district was at the same time altered to that of *Aylesbury*.
243	MALMESBURY - -	1 October -	Part of the parish of St. Paul Malmesbury (population 1,330) was transferred from *Malmesbury Eastern* sub-district to *Malmesbury Western* sub-district. Parts of the parishes of Charlton, Crudwell, and Hankerton (aggregate population 368) were transferred from *Malmesbury Western* sub-district to *Malmesbury Eastern* sub-district.
333	STOW-ON-THE-WOLD -	1 June -	The parish of Bledington (population 367) was transferred from *Bourton-on-the-Water* sub-district to *Stow-on-the-Wold* sub-district.
378	MARTLEY - -	1 October -	Part of the parish of Hallow (designated South Hallow civil parish by the Worcester Extension Act of 1885, population 509) was transferred from the *Holt* sub-district of MARTLEY to the *South* sub-district of WORCESTER (379 : 1).
379	WORCESTER - -	1 October -	*See* MARTLEY (378) and DROITWITCH (383).
382	PERSHORE - -	1 June -	The sub-districts of *Upton Snodsbury* and *Pershore* were united under the name of *Pershore* (aggregate population 9,732).
383	DROITWICH - -	1 October -	Part of the parish of Claines (designated South Claines civil parish by the Worcester Extension Act of 1885, population 8,582) was transferred from the *Claines* sub-district of DROITWITCH to the *North* sub-district of WORCESTER (379 : 2).
396	STRATFORD-ON-AVON -	2 October -	The parishes of Charlecote, Fulbrook, and Hampton Lucy (aggregate population 754) were transferred from the *Wootton Wawen* sub-district to the *Wellesbourne* sub-district.
431	NOTTINGHAM - -	1 February -	The sub-districts of *St. Mary* and *Exchange* were united under the name of *Exchange* (aggregate population 24,272).

TABLE 67 (*continued*).—**Changes** in the **Constitution** of **Registration Districts** and **Sub-districts** during the Year **1885.**

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
		1885.	
431	NOTTINGHAM - -	1 April -	The sub-districts of *Snenton* and *Exchange* were united under the name of *Exchange* (aggregate population 40,295).
455	WEST DERBY - -	1 May -	The sub-district of *Everton* was divided into two sub-districts, viz., *South Everton* (population 65,044 and *North Everton* population 44,768).
474	BLACKBURN - -	1 October -	The sub-district of *Blackburn* was divided into two sub-districts, viz., *Blackburn Northern* (population 50,833) and *Blackburn Southern* (population 41,105).
630*a*	ANGLESEY - - -	1 January -	The district of ANGLESEY was divided into two Superintendent Registrar's districts, viz., the ANGLESEY district consisting of the sub-districts of *Llangefni, Amlwch,* and *Llandyfrydog,* and that of HOLYHEAD consisting of the sub-districts of *Bryngwran, Llanddausaint,* and *Holyhead.*
630*b*	HOLYHEAD - -	30 April -	The parishes of Bodewryd and Rhosbeirio (aggregate population 68) were transferred from the *Llanddausaint* sub-district of HOLYHEAD to the *Llandyfrydog* sub-district of ANGLESEY.

Under the provisions of "The Divided Parishes and Poor Law Amendment Act, 1876," changes were made on the 24th March 1885 in the constitution of the following Districts, viz.:—ROMSEY (99), ABINGDON (115), BERKHAMPSTEAD (139), WYCOMBE (142), AYLESBURY (143), NEWPORT PAGNELL (145), HEADINGTON (149), OXFORD (150), BANBURY (155), BRACKLEY (156), QUNDLE (166), *ST. IVES (169), WOBURN (174), LEIGHTON BUZZARD (175), *CAMBRIDGE (179), LINTON (180), ELY (182), WISBECH (185), HALSTEAD (198), RISBRIDGE (202), SUDBURY (203), COSFORD (204), HOXNE (210), BLYTHING (216), WANGFORD (217), *SMALLBURGH (221), DEPWADE (230), KING'S LYNN (237), DOWNHAM (238), CALNE (245), DEVIZES (247), BRADFORD-ON-AVON (249), WARMINSTER (251), PEWSEY (252), AMESBURY (253), ALDERBURY (254), *TISBURY (256), MERE (257), DORCHESTER (265), SHERBORNE (266), BEAMINSTER (267), AXMINSTER (269), HONITON (270), ST. THOMAS (271), NEWTON ABBOT (273); OKEHAMPTON (281), CREDITON (282), SOUTH MOLTON (284), *BARNSTAPLE (285), TORRINGTON (286), BIDEFORD (287), LAUNCESTON (291), WILLITON (303), TAUNTON (306), BRIDGWATER (307), LANGPORT (308), CHARD (309), YEOVIL (310), WINCANTON (311), FROME (312), SHEPTON MALLET (313), WELLS (314), AXBRIDGE (315), BEDMINSTER (319), BARTON REGIS (321), CHIPPING SODBURY (322), GLOUCESTER (327), WHEATENHURST (328), STROUD (329), CHELTENHAM (335), LEDBURY (337), ROSS (338), HEREFORD (339), CLEOBURY MORTIMER (347), *ATCHAM (351), NEWPORT (358), STAFFORD (359), BURTON-ON-TRENT (367), LICHFIELD (369), MARTLEY (378), ATHERSTONE (389), LUTTERWORTH (400), BLABY (403), *HINCKLEY (404), MARKET BOSWORTH (405), ASHBY-DE-LA-ZOUCH (406), LOUGHBOROUGH (407), *LEICESTER (409), UPPINGHAM (412), GAINSBOROUGH (426), EAST RETFORD (427), WORKSOP (428), NEWARK (433), CHESTERFIELD (439), CHESTER (450), *WARRINGTON (459), WETHERBY (490), LEEDS (501), ROTHERHAM (510), DONCASTER (511), THORNE (512), GOOLE (513), DURHAM (549), CHESTER-LE-STREET (552), MONMOUTH (581), *NEATH (590), *CARMARTHEN (597), *HAY, (610), and WREXHAM (618).

* In these cases the limits of the sub-districts only are affected.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for subsequent Years has been deduced from the Excess of Births over Deaths registered in each Year. The facts for the five years 1871-75 were not collected owing to the disturbed state of the country; those for the year 1877 and for the years 1879-85 have not yet been finally dealt with. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The populations in inter-census years are somewhat over-estimated, no account having been taken of emigration.

NOTE.—For area and population of the Registration Divisions and Counties, *see* pages 64-67.

* The *Registration Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

BIRTHS, DEATHS, and MARRIAGES, registered in the Year 1885—*continued.*

* The 632 *Superintendent Registrars' Districts* (Paddington 1a and Holyhead 630b having been constituted Superintendent Registrars' Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Sub-districts (2146 in number at the end of the year 1885) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† The Deaths in the principal Institutions of England in 1885 are given on pages 71–92.

‡ 1a & 1b.—Paddington and Kensington constituted one Superintendent Registrar's District prior to 1st January 1885, *see* Table 67.

* The *Registration or Union Counties* consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Census Report of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. Divorced men and women who marry are classified in these Abstracts as bachelors and spinsters.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1885.

THE following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1885 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1641 Institutions; of which 729 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 826 Hospitals or Infirmaries; and 86 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1641 Institutions 56,593 deaths were registered during the year, or 10·8 per cent. of the total deaths in England and Wales, against 10·6 and 10·3 per cent. in the two preceding years; 35,239 occurred in Workhouses, 16,200 in Hospitals, and 5,154 in Lunatic Asylums. The proportion to total deaths was 6·7 per cent. in Workhouses, 3·1 in Hospitals, and 1·0 in Lunatic Asylums; the proportion of total deaths recorded in Workhouses showed a slight further increase upon proportions in the preceding years; in 1875 the proportion of deaths that occurred in Workhouse establishments did not exceed 5·6 per cent., since which it has constantly increased.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Private Asylums for Idiots and Imbeciles, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1885.

* The deaths of 43 males from Hydrophobia in the year are classed under Zoogenous Diseases in the Table of Causes of Death, p. 108.
† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury. The same is done with deaths attributed to Traumatic Tetanus. The figures above refer, therefore, only to those deaths from operation and those deaths from Traumatic Tetanus concerning which no further information was obtained.

OF the above 10,807 ACCIDENTS, 113 are stated to have occurred to Persons in a state of INTOXICATION, and 2. to Persons suffering from DELIRIUM TREMENS. And in 329 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year.		1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.

* The deaths of 17 females from Hydrophobia in the year are classed under Zoogenous diseases, in the Table of Causes of Death, p. 189.
† *See* note *, p. 182.

OF the above 4132 ACCIDENTS, 57 are stated to have occurred to Persons in a state of INTOXICATION, and in 99 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year.		1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.

INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881.

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 196) *and "Index of certain Towns"* (page 206).

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	360; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley	Watford	137; 4

ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S FORTY-EIGHTH ANNUAL REPORT.

	PAGES
ACCIDENT; Decline in deaths from, in 1885	xxiii
Deaths of Males and Females from, at various Ages, in 1885	179–185
AGES; Mean, at Marriage, in 1885, of Men, Women, Bachelors, Spinsters, Widowers, and Widows	viii
Rise in the Mean Age with decline of Marriage-rate	ix
Marriages at early, more common among Working Men than among other classes of the Population	ix
Proportion of Bachelors of different Occupations marrying at the several, 1884–85. (Table C.)	ix
Mean, at Marriage, of Bachelors of different Occupations, 1884–85	x
Death-rates at different, decline in 1885	xii
Deaths of Infants under one year, in 1885	xii
Deaths of Persons returned as Centenarians, in 1885	xii
Mortality of Males and Females at 12 groups of, in each year, 1838–85, and in Decenniads and Quinquenniads, 1841–85. (Tables 19–21.)	xlviii–l
Mortality in Counties, at 12 groups of, in 1885. (Table 23.)	lii
Mortality in Counties, of Infants under 1 year to 1000 births, in each year, 1875–85, and the Mean of 1875–84. (Table 24.)	liii
of 363,154 Persons married in 1885, distinguishing Bachelors Spinsters, Widowers, and Widows	68–70
at Death, of Males and Females in 1885, in Divisions and Counties	94–103
at Death, of Males and Females dying from different Causes, in England, in 1885	106–113
at Death, of Males and Females dying from different Causes, in London, in 1885	114–121
at Death, of Males and Females dying from different forms of Violence, in England, in 1885	179–191
ALCOHOLISM; No reduction in mortality from	xvii
AREA; Persons to a Square Mile, in England, in each year, 1851–85. (Table 43.)	lxxv
of Town and Country Districts. (Table 44.)	lxxvi
in Acres and Hectares, of the United Kingdom and its parts. (Table 48.)	lxxx
in Acres, of the Islands in the British Seas—Man, Jersey, Guernsey, &c. (Table 50.)	lxxxi
in Acres, of each Division and County	64–67
in Acres, of each District and Sub-district	4–63
ARMY, THE; Strength and Mortality of, in 1885	xxiv
Nationality of, in 1861–71–81. (Table 51.)	lxxxii

PAGES

ARMY, THE—*continued.*

Average Strength and Distribution of, in different parts of the United Kingdom and Abroad in each Year, 1864–85. (Table 52.) lxxxii

Average Strength, Deaths, and Death-rate of, in the United Kingdom in 1885. (Table 53.) lxxxii

Death-rates in, at Home and Abroad in each Year, 1861–85. (Table 54.) lxxxiii

Deaths in the Army Abroad, in each Year, 1861–85, and the estimated Proportions belonging to England, Scotland, Ireland, and foreign parts. (Table 55.) lxxxiii

ATMOSPHERIC PRESSURE in 1885 xxvi

AURORÆ BOREALES in 1885 xxviii

AUSTRIA; Marriage, Birth, and Death rates in each Year, 1866–85. (Table 68.) xcix

Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853–85. (Table 75.) ciii

BANKERS' CLEARING HOUSE; amount cleared per head of population, 1868–85, compared with Marriage-rate. (Table A.) . . . vi

BAROMETER; Readings of the, in 1885 xxvi

(*See also* METEOROLOGY.)

BELGIUM; Marriage, Birth, and Death rates in each Year, 1866–85. (Table 68.) xcix

Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853–85. (Table 81.) cvi

BIRTHS; Number registered in 1885 xi

Sex proportions of xi

Illegitimate, Proportion to Population, and to total Births in several Counties xi

of British Subjects at Sea, entries of, in Marine Register Book during 1885 xxiv

registered, in England, and excess over Deaths, in each Year, 1838–85. (Table 1.) xxx

in each Quarter of the Years 1838–85. (Table 12.) . . . xli

in each Year 1838–85; Legitimate and Illegitimate in 1842 and 1845–85, and Proportion of Males to Females, and of Illegitimate to Total. (Table 13.) xlii

Proportion of Illegitimate, to 100 Births in Counties in each Year, 1875–85, and the mean of 10 Years, 1875–84. (Table 15.) . xliv

Proportion of Males to Females born in Counties in each Year, 1875–85, and the mean of 1875–84. (Table 16.) . . xlv

Aggregate Number of Names on the Registers of, in each Year, 1837–85. (Table 47.) lxxix

in the United Kingdom and its parts, 1885. (Table 48.) . . lxxx

in the Islands in the British Seas, in each Year, 1851–85. (Table 50.) lxxxi

of British Subjects at Sea in each Year, 1857–85. (Table 57.) . lxxxiv

in Scotland, 1855–85. (Table 70.) c

in Ireland, 1864–85. (Table 71.) ci

in European States, for series of years. (Tables 72–84.) . . ci–cvii

in 1885, in Divisions and Counties, distinguishing Sex, Legitimate and Illegitimate 2–3

in 1885, in Districts, and Sub-districts, distinguishing Legitimate and Illegitimate 4–63

Illegitimate. (*See* ILLEGITIMATE BIRTHS.)

	PAGES
BIRTH-RATE; in 1885 the lowest since 1848	xi
disparity in several Counties	xi
Illegitimate, in 1885, the lowest recorded	xi
in each Year, 1838–85, and the mean of 48 Years. (Table 2.)	xxxi
Means of 48 Years, 1838–85, and of decennial and quinquennial periods 1841–85. (Table 3.)	xxxii
in each Quarter of the Years 1838–85. (Table 12.)	xli
in each Year, 1838–85, and Legitimate and Illegitimate rates in 1842 and in 1845–85. (Table 13.)	xlii
in Counties in each Year 1875–85, and the mean of 1875–84. (Table 14.)	xliii
in the United Kingdom and its several parts, 1885. (Table 49.)	lxxx
in Scotland, 1855–85. (Table 70.)	c
in Ireland, 1864–85. (Table 71.)	ci
in European States, for series of Years. (Tables 68–84.)	xcix–cvii

REPORT

TO

The Right Honourable CHARLES T. RITCHIE, M.P.,
President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
30th November, 1887.

(1886.)

SIR,

I HAVE the honour to submit to you the following report on the births, deaths, and marriages, registered in England and Wales in the year 1886.

POPULATION.

The births and deaths registered in the year numbered respectively 903,866 and 537,276, so that the natural increment, or excess of births over deaths, was 366,590, and equal to 1·32 per cent. of the estimated population at the beginning of the year. The population of England and Wales, as enumerated in April 1881, consisted of 25,974,439 persons. The excess of births over deaths from that date to the middle of 1886 was 1,971,600; so that the population at the later date, if its growth were determined simply by the balance between births and deaths, would have been 27,946,039. This, however, takes no account of emigration and immigration; and, as there are no data for determining with accuracy the balance between these two factors, the best method of estimating the population is to assume that the rate of growth which existed in the last intercensal period has been maintained in the years that have since elapsed. On this, which is the usual, hypothesis the population of England and Wales in the middle of 1886 consisted of 27,870,586 persons, of whom 13,562,621 were males, and 14,307,965 were females. (Table I.) It is on this population that the rates in this report have been calculated.

MARRIAGES.

The marriages registered in 1886 numbered 196,071, giving a rate of 14·4 persons married to 1000 living. This is the lowest marriage-rate recorded since civil registration began. (Tables 2 and 3.) The fall in the marriage-rate was coincident, as previous reports (cf. 44th and 48th Annual Reports) have shown to have been the general rule in recent years, not only with a fall in the value per head of British exports, but also with a fall in the average price of wheat. (Table A.)

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860-86.*

YEARS.	Marriage-rate.	Value per Head of Population of United Kingdom.			Average Price of Wheat per Quarter.	Amount cleared at the Bankers' Clearing House per Head of Population.

1886	14·1	5 15 9	9 10 7	16 17 0	31 1	212

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures relating to exports and imports are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are derived from the same source.

Forms of Marriage.—Of the 196,067 marriages contracted in 1886, 138,567, or 707 per 1000, were solemnised according to the rites of the Established Church, and 57,500, or 293 per 1000, otherwise. The proportions had been almost exactly the same in each of the two immediately preceding years (Table 5). Among the Church marriages there was, as had been the general rule for many successive years, a slight increase in the proportion of marriages by banns and a slight diminution in the proportion of marriages by licence.

From a table, which makes its first appearance in this Report (Table 6), it will be seen that the proportion of Church marriages to total marriages varied enormously in different parts of the country. By far the lowest proportions were registered, as might be anticipated, in North and South Wales and Monmouthshire, and the proportion was also very low, less than 60 per cent., in Devonshire, Cornwall, Durham, Northumberland, and Cumberland; while the proportions were highest, in each case above 80

per cent., in London, the extra-metropolitan portion of Middlesex, Hertfordshire, Buckinghamshire, Oxfordshire, Huntingdonshire, and Essex, or, speaking generally, in London and the immediately surrounding counties, as also in Staffordshire, Worcestershire, and the little county of Rutland.

The marriages solemnised otherwise than by the rites of the Established Church were divided in much the same proportions as in recent years; the most noticeable features being that the increase in the proportion of Jewish marriages, to which attention was directed in the last Annual Report, was continued in 1886 (Table 5), and that the proportion was higher than in any previous year.

First Marriages; Re-marriages.—Of the 196,071 men whose marriages were recorded in 1886, 171,664, or 87·6 per cent., were bachelors, and 24,407, or 12·4 per cent., were widowers. Of the 171,664 bachelors, 164,167, or 95·6 per cent., married spinsters, and 7497, or 4·4 per cent., married widows. Of the 24,407 widowers who re-married, 15,134, or 62·0 per cent., married spinsters, and 9273, or 38·0 per cent., married widows.

Of the 196,071 women whose marriages were recorded in 1886, 179,301, or 91·4 per cent., were spinsters, and 16,770, or 8·6 per cent., were widows. Of the 179,301 spinsters who married, 164,167, or 91·6 per cent., married bachelors, and 15,134, or 8·4 per cent., married widowers. Of the 16,770 widows who re-married, 7497, or 44·7 per cent., married bachelors, and 9273, or 55·3 per cent., married widowers.

As compared with the returns for 1885, the marriages of bachelors, of spinsters, of widowers, and of widows, all showed a decline.

Re-marriages of Divorced Persons.—The number of persons married in the year who were described as divorced was 163, and included 78 men and 85 women; these showed a decline of 7 from the number of divorced persons married in 1885. Of the 78 divorced men, 65 married spinsters, 8 married widows, and 5 married divorced women. Of the 85 divorced women, 59 married bachelors, 21 married widowers, and 5 married divorced men.

Ages at Marriage.—In 13,609, or 6·9 per cent., of the marriages, the ages of both contracting parties were not inserted in the register. The mean age at marriage of the remaining 182,462 couples was 28·2 years for the men and 25·9 for the women. The mean age of the widowers was 43·8 and of the widows 40·1 years; while that of the bachelors was 26·2 and of the spinsters 24·6 years. The mean ages at marriage, as was noticed in the last Annual Report, have been gradually rising since 1873, when they were at their minima, and the figures just given for bachelors and spinsters are the highest as yet recorded; but, notwithstanding this, under-age marriages are still very numerous, for no fewer than 13,079, or 8·1 per cent., of the bachelors, and 39,533, or 23·6 per cent., of the spinsters, whose marriage-ages were stated in 1886, were under 21 years of age; while in 9558, or 6·2 per cent., of the marriages between bachelors and spinsters, whose ages were stated, both parties were minors.

In the last Annual Report (pp. ix–x) some account was given of the average ages at which men marry in different ranks of life. It has been found since that report was published that, by a clerical oversight, the odd months over the fully completed years of age had not been taken into account, and that consequently the average age was under-stated in each group by six months. The table, duly corrected, is here reprinted; and to it has been added another column giving the average ages of the women at marriage with men in the same groups of occupations. The table is based

on the registered ages of bachelors and spinsters only, widowers and widows alike being left out of account.

TABLE B.—AVERAGE AGES at MARRIAGE of BACHELORS and SPINSTERS in OCCUPATIONAL GROUPS, 1884–85.

Occupations.	Bachelors.	Spinsters.	Difference between the Ages of Husband and of Wife.
Miners	24·06	22·46	−1·60
Textile hands	24·38	23·43	−0·95
Shoemakers, Tailors	24·92	24·31	−0·61
Artisans	25·35	23·70	−1·65
Labourers	25·56	23·66	−1·90
Commercial Clerks	26·25	24·43	−1·82
Shopkeepers, Shopmen	26·67	24·22	−2·45
Farmers and Sons	29·23	26·91	−2·32
Professional and Independent Class	31·22	26·40	−4·82

If the two sets of figures be compared with each other it will be seen that they present a very close resemblance in their main features; for in those groups in which the men marry early, so also do the women; while in those, on the other hand, where the men postpone marriage till comparatively riper years, the wives also are more mature. Thus, the miners, and next to them the textile hands, are the groups in which the mean age at marriage is lowest both for men and for women; while the farmers and the professional and independent class come in each set of figures at the other end of the column, showing the highest mean ages both for men and for women. It is, however, noticeable, among other small points of difference between the male and female series, that while the professional and independent class are far ahead of all the other groups, farmers included, in respect of the mean age at which the men venture to marry, this is not the case with their brides, for in this respect they fall somewhat behind the farmers.

A third column in the table shows the average difference of age between the husband and wife in the several groups, and it is seen that, speaking generally, the more advanced the marriage-age, the greater is this difference. In other words, the ages of the wives in the several groups differ considerably less than do the ages of the husbands.

The marriages which served for the calculation of the mean ages in Table B. were carefully taken from all parts of the country, so that the sample might fairly represent the bulk. This precaution was absolutely necessary; for there appear to be local conditions, of which our official returns afford no explanation, that most seriously affect the age at which marriage is usually contracted in different counties. Thus, on comparing the marriages of miners for one complete year (1884) in Durham, with those of miners in Staffordshire, it was found that the proportion of under-age bridegrooms was not far from twice as high in the latter as in the former county; and, similarly, when the marriages of labourers in the two agricultural counties of Dorsetshire and Bedfordshire were compared with each other, the under-age proportion was nearly twice as high in the latter as in the former. Thus it will be seen on examining Table 8, which gives the per-centage of under-age husbands and wives in each county, that though the per-centage of the former (judged by the mean proportion in the ten years 1876–85) is very high in Leicestershire, Nottinghamshire,

Staffordshire, the West Riding, and Derbyshire, among mining and textile counties, yet it is scarcely above the average in the pre-eminently mining county of Durham; while, on the other hand, it is excessively high in Buckinghamshire, and still more so in Bedfordshire, in neither of which counties are there any miners or any notable proportion of textile hands. The local conditions or customs in these counties are apparently more potent than the occupations. As regards the marriage-ages of the wives, the county figures tally more closely with the occupational figures than do those of the men; for the counties in which on an average of ten years (1876–85) the proportions of under-age brides were highest were, beginning from the highest, Durham, Nottinghamshire, Staffordshire, Derbyshire, and the West Riding.

Signature in Marriage Register. — Of the men who married in the year, 96 per 1000, and of the women 115 per 1000, were unable to write their names, and signed the register by mark; while in 37 per 1000 of the marriages both husband and wife were alike illiterate. How great an improvement these figures imply in the diffusion of elementary education will be seen on consulting Tables 7 and 8.

Taking England and Wales as a whole, the number of men who are unable to write is considerably smaller than that of women, though the difference in this respect between the sexes is rapidly diminishing; for in 1856 there were 140 such women to 100 such men, whereas in 1886 there were but 120. But taking the counties separately there is great diversity, and the general rule, as is conspicuously visible in Table 8, is that in agricultural counties the male, and in mining and industrial counties the female, is the worse educated sex.

Buildings registered for the Solemnisation of Marriages.—The number of buildings registered for marriages by other rites than those of the Established Church, standing on the register at the end of 1886, was 9766 (Table 9), showing an increase of 173 in the course of the year, or of 1·8 per cent. on the number on the register at the end of 1885. There were also 14,818 churches or chapels in which marriages could be solemnised according to the rites of the Established Church.

Certified Places of Worship.—There were on the register at the end of 1885, 24,075 places of worship (not belonging to the Established Church), certified under Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81. During 1886, 741 new buildings were registered, while 116 were removed from the list by cancellation; thus the net increase during the year was 625, and the total number on the register on 31st December 1886 was 24,700. Doubtlessly, however, some of the buildings that stand on the register are no longer in use, for while there is a sufficient provision for the registration of all new buildings, inasmuch as the superintendent registrars receive fees for supplying the requisite information to the Registrar-General, there is no effective provision to ensure the removal from the list of such buildings as have gone out of use.

When application is made for a certificate, the applicant is called on to fill in and sign a form, in which among other particulars the precise designation of the community that purposes to make use of the building for worship is included. The great variety of such designations may be judged of from the following list, which gives the names of the several bodies that obtained certificates for additional buildings during the year 1886, and also the number of buildings certified during the year for each such body. The list, however, excludes the designations of a few sects,

in cases where, through cancellation, no increase to the number of buildings on the register occurred during the year.

Births.

The births registered in 1886 numbered 903,866, and were in the proportion of 32·4 to 1000 persons living. This is the lowest rate recorded since 1848, when the rate was also 32·4.

The rate varied from 26·7 in North Wales, 27·3 in Herefordshire, and 27·4 in Sussex, to 36·1 in Staffordshire, 36·2 in Durham, 36·8 in Essex, and 37·4 in Monmouthshire. (Table 10.) The causes of the differences presented by the registration counties in regard to their birth-rates, differences which repeat themselves with very considerable constancy year after year, have been discussed in a previous report. (42nd Annual Report, p. xiv).

Sex.—The male births numbered 460,470, and the female births numbered 443,396, the former being to the latter in the proportion of 1039 to 1000, the mean proportion in the preceding ten years having been 1038 to 1000.

Illegitimate Births.—The infants registered as born out of wedlock numbered 42,838, and were in the proportion of 1·5 to 1000 persons living, a lower rate than in any previous year (Table 2.) The proportion of births registered as illegitimate to total births was 47 to 1000, the mean proportion for the ten preceding years having been 48 per 1000. In the registration counties the proportion varied from 32 in the extra-metropolitan portion of Middlesex, 34 in Essex, and 38 in London, to 72 in Norfolk, 75 in North Wales, 79 in Cumberland, 80 in Herefordshire, and 82 in Shropshire. These differences between counties, as may be seen in Table 10, repeat themselves with much constancy.

Deaths.

The deaths registered in 1886 numbered 537,276, and were in the proportion of 19·3 to 1000 persons living. The rate in 1885 had been 19·0, and in 1881 had been 18·9, but with these two exceptions the rate in 1886 was the lowest as yet recorded. In each of the six years 1881–6 the death-rate was below 20·0 per 1000, having been above 20·0 in every other year since civil registration began. (Table 2.)

The rate ranged from 14·7 in Westmorland, 16·0 in the extra-metropolitan part of Surrey, and 16·1 in Sussex, to 21·0 in South Wales, 21·9 in Lancashire, 22·1 in Cornwall, and 23·1 in Monmouthshire.

The rate in 1886 was below the decennial average (Table 10) in most of the registration counties, and notably in the counties forming the West Midland, the North Midland, the North-Western, the Yorkshire, and the Northern Divisions of the country; but the reverse was the case in the South Midland and the Eastern Counties, as also in the extra-metropolitan part of Kent, and in Hampshire, Dorsetshire, Devonshire, Cornwall, Herefordshire, Shropshire, Monmouthshire, and South Wales.

Sex.—The male death-rate was 20·3, and the female rate 18·3 per 1000 living of each sex respectively, giving for equal numbers living 1109 male deaths to 1000 female deaths. In no year previous to 1863 did the proportion reach 1100, while in no year since that date has it failed to be above that level. There has clearly, therefore, been some condition in operation that has prevented males from sharing equally with females in the general diminution of mortality that has been so conspicuous in recent years, and the probable explanation is that more of the male than of the female mortality is due to causes that lie outside the reducing influences of sanitary measures, such causes, for instance, as violence, overwork, drink, and generally all kinds of excess.* It is worth noting, therefore, that in

* This, however, can scarcely be the complete explanation, for a careful examination of the mortality at different ages shows that the increase of male as compared with female mortality was shared by all ages, though it was far the most marked in the age-periods which would be most affected by the causes mentioned above, namely from 25 to 55 years of age.

each of the last two years, 1885 and 1886, the male mortality was lower in proportion to the female mortality than in any year since 1866; and moreover, that while in the five years 1876–80 the average proportion of male to female deaths was, for equal numbers living, 1133 to 1000, in the six years that have since elapsed the proportion has only averaged 1120.

Ages at Death.—On looking at Tables 11–13, it will be seen that, though the general death-rate both for males and females was slightly higher in 1886 than on two previous occasions, namely 1881 and 1885, yet the rate for each separate age-period from 5 to 35 years of life was the lowest on record. The mortality in the first quinquennial period, 0–5 years, was also far below the average, though higher than on three previous occasions, viz., 1881, 1883, and 1885, in each of which years there was much less summer diarrhœa than in 1886, when the diarrhœa mortality was much above the average in the ten preceding years, and in consequence the proportion of infantile deaths to births was 149 per 1000, and higher than the average of the previous ten years, in which the proportion was only 142 to 1000 (Table 10). The year 1886 then was unfavourable to infants, as it was also to persons at the other end of life, for in each age-period from 65 years onwards the mortality was very considerably above the average of recent years.

Among the deaths were 71 of reputed centenarians, 27 of whom were males and 44 were females. In 1885 and 1884 the numbers had been 63 and 58 respectively.

Urban and Rural mortality.—The terms urban and rural are somewhat vague, and the line of demarcation between the two can only be drawn arbitrarily. In Table 25 will be found stated the sense in which the terms are here used, and it will be seen that while the urban death-rate in 1886 was 20·0, the rural rate was only 18·0 per 1000 living. This difference, however, is much less than that in most previous years, for while the urban rate previously to the beginning of the current decennium had been from 22 to 26 per cent. above the rural rate, in 1881–4 the excess was only 18 per cent., and in 1885 and 1886 fell still further to 11 per cent. (Table 24), although in the latter of these two years summer diarrhœa, a specially urban disease, was more than usually prevalent. The healthiness of towns, as measured by their death-rates, appears therefore to be improving more rapidly than the healthiness of rural districts.

Registered Causes of Death.

The assigned causes of death were distributed as follows in the several classes:—

Table C.—Mortality from the several Classes of Diseases.

Causes of Death.	Total Deaths in 1886.	Rate per Million living.						
		1886.	1885.	1884.	1883.	1882.	1881.	Mean 1871–80.
Zymotic diseases	73,747	2,648	2,507	3,094	2,639	3,088	2,660	3,724
Parasitic diseases	990	35	30	38	39	37	39	57
Dietetic diseases	1,656	59	59	58	66	68	66	63
Constitutional diseases	92,751	3,330	3,276	3,404	3,407	3,395	3,328	3,594
Developmental diseases	45,103	1,618	1,598	1,574	1,632	1,558	1,582	1,674
Local diseases	276,302	9,915	9,908	9,543	9,390	9,591	9,348	9,920
Violence	17,444	626	625	651	675	669	697	736
Ill-defined and not specified causes	29,283	1,047	1,007	1,149	1,188	1,154	1,160	1,610
All causes	537,276	19,278	19,010	19,511	19,536	19,560	18,880	21,378

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of specially preventable diseases numbered 73,747, being in the proportion of 2648 to a million persons living; a proportion, which, though not actually the lowest as yet recorded, was far below the average of the decennium 1871–80. (Table C.)

The deaths ascribed to *small-pox* numbered 275, and were far lower in proportion to the population than in any previous year. There were, however, also 93 deaths ascribed to chicken-pox; and, as this ailment is rarely if ever fatal, in all probability most or all of these deaths were really due to small-pox. Supposing this to be the case, the small-pox deaths would amount to 368, being in the proportion of 13·2 to a million living; and even this proportion was far lower than the uncorrected small-pox rate in any previous year. (Tables 16, 17, 18.)

The deaths from *typhus* were in the proportion of only 9 to a million living, a lower rate than in any previous year. In 1869, the first year in which typhus was separated from other forms of fever, the rate was 193 per million; but from that date it has fallen almost uninterruptedly, with the exception of a slight recrudescence in 1882–83, to its present low figure. This disease still, however, maintains comparative activity in some of the northern counties and notably in Lancashire and Durham; for while the annual rate per million in all England and Wales averaged 20 in the six years 1881–86, in Lancashire it averaged 77 and in Durham 63.

The deaths from *enteric fever*, perhaps the best single test of sanitary condition, were in the proportion of 182 per million living. In the immediately preceding year the rate had been 173 per million; but with this exception the rate in 1886 was the lowest recorded, and no less than 53 per cent. lower than in 1869, the first year for which the rate is known.

The death-rates from *diphtheria* and *whooping-cough* were respectively 147 and 464 per million living, and did not depart materially from the average rates in recent years.

The mortality from *diarrhœa*, under the influence of the hot weather that prevailed during the third or summer quarter (Table 35), rose to 888 per million living, having averaged only 653 in 1881–85, and 834 in the still earlier quinquennium 1876–80 (Table 17).

The mortality from *measles*, to which cause 12,013 deaths were ascribed, was in the proportion of 431 per million living, and, though not so high as in the immediately preceding year, 1885, was considerably above the average of the decennium, 1876–85, which was only 398 per million. This disease was especially fatal in the counties of Warwick, Stafford, Cornwall, Monmouth, Huntingdon, Devon, Lancaster, Northampton, and Worcester, the mortality in these several counties ranging from 808 to 600 per million; while on the other hand the rate was less than 100 per million living in Berkshire, Dorsetshire, Wiltshire, North Riding, Somersetshire, Westmorland, and North Wales.

The deaths from *scarlet fever* numbered only 5986, being absolutely, and not merely in relation to the population, fewer than in any previous year in the table (Table 15), which goes back to 1862. Indeed, with the exception of the immediately preceding year 1885, there is scarcely a year in the table in which the scarlet fever deaths were not more than twice as numerous as in 1886. Relatively to the population, the mortality was 215 per million, having been 231 in 1885, 400 in 1884, 472 in 1883, and never in any earlier year under 500 (Table 16). The highest mortalities from

this disease were in Durham, West Riding, and South Wales, in each of which the rate exceeded 400 per million, while it was less than 50 per million in Rutlandshire, Dorsetshire, Herefordshire, Westmorland, and Kent (extra-metropolitan).

In previous Reports (47th Annual Report, and Annual Summary for 1880) some account has been given of the geographical distribution of scarlet fever and also of its relations to seasons. It may be well here to examine the relations in which this disease stands to age and sex, so far as official returns throw light on the subject.

In the course of the 27 years 1859–85, nearly half a million deaths from scarlet fever were registered in England and Wales. These deaths form the basis of the following table, which gives the mean annual mortality per million living at successive age-periods, for each sex.

TABLE D.—MEAN ANNUAL MORTALITY from SCARLET FEVER per Million living at successive AGE-PERIODS, 1859–85.

AGE.	Annual Deaths per Million living.	
	Males.	Females.
0–1	1664	1384
1–2	4170	3874
2–3	4676	4491
3–4	4484	4332
4–5	3642	3556
0–5	3681	3482
5–10	1667	1613
10–15	346	381
15–20	111	113
20–25	59	77
25–35	36	58
35 and upwards	13	15
All Ages	778	717

It will be seen that in each sex the mortality from scarlet fever rises to a maximum in the third year of life, and then falls, at first slowly, but afterwards rapidly, becoming smaller and smaller with each successive age-period, to the end of life.

Further it will be noted that from birth to the end of the tenth year of life, that is to say, throughout that portion of life in which by far the greater part of the deaths from scarlet fever occur, the male mortality is considerably higher than the female mortality, but that after this period the reverse is the case, the excess being in each later age-period on the side of the female sex.

Seeing on what a very large basis these rates have been calculated, both as regards number of deaths and number of years over which they were spread,* we may feel assured that the differences here pointed out between successive age-periods and the two sexes are not accidental or transitory, but fixed and permanent; and the question next to be considered is whether these differences of mortality are due to the disease being more common, or to its being more likely to terminate fatally in one sex than

* The very variable severity of scarlet fever in different outbreaks makes it necessary, for any trustworthy statistics, to take a long series of years into account.

the other, and at some ages than others. Are the differences, that is to say, differences of prevalence or differences of case-mortality?

The first step in examining this question is to ascertain the case-mortality, that is to say, the proportion of deaths to cases at each age-period and in each sex.

The data available for this calculation are neither so abundant nor so complete as could be wished. The particulars, however, as to age, sex, and results have been obtained in 17,795 cases of scarlet fever admitted during the 12 years 1874–85 into the London Fever Hospital and the Metropolitan Asylum Hospitals at Stockwell and Homerton, and the rates given in Table E. are calculated from these 17,795 cases. It was necessary, however, to supplement, to a certain extent, the information obtained from these London Hospitals; for the published reports of these hospitals do not distinguish the several years of life in the 0–5 years-period, and, as this is the period of life in which scarlet fever is at its maximum, the separation of these single years from each other is of much importance. This deficiency has been met in the following manner:—The official reports for Christiania in Norway give the full particulars of nearly 5,000 cases of scarlet fever which had occurred there in the years 1870–82. The case-mortality among these attacks for the aggregate 0–5 years age-period differed very slightly from the case-mortality for the corresponding age-period in London, and it was therefore no very great assumption to suppose that there was a corresponding degree of similarity between the case mortalities in the single years which make up the 0–5 years period. It has been assumed therefore that the case-mortality in the 1st, 2nd, 3rd, 4th, and 5th years of life in London differed from the corresponding case-mortalities in Christiania just in the same degree as did the case-mortality in the aggregate age-period, made up of those five years, and the rates given in the table for these first five years are those thus obtained.*

TABLE E.—CASE-MORTALITY.—DEATHS per 1,000 CASES of SCARLET FEVER in HOSPITALS, 1874–85.

AGE.	Males.	Females.
0–1	395	442
1–2	384	346
2–3	255	226
3–4	184	174
4–5	130	112
0–5	241	217
5–10	106	97
10–15	56	53
15–20	40	34
20–25	39	32
25–35	75	43
35 and upwards	85	65

The figures in this table are very striking, and show beyond dispute how utterly untenable is the statement made, even in some works of high medical authority, that age and sex are without importance as elements in the

* The case-mortality in Christiania for the entire 0–5 age-period was, for males 211 per 1,000 cases, while in London it was 241. For females it was 200 in Christiania and 217 in London. The case-mortalities in Christiania for the single years have therefore been raised by 14·22 per cent. for males and by 8·5 per cent. for females, to give the mortalities for London. Cf. Beretning om Folkemængden og Sundhedstilstanden i Christiania, 1882, pp. xiii–xiv.

prognosis of scarlet fever. As regards sex, putting aside the first year of life, when the cases are so few that the accuracy of the calculated case-mortality is doubtful, the danger of an attack of this disease is at every age-period considerably greater if the patient be of the male than if of the female sex. The differences due to sex are, however, as nothing in comparison with those due to age. The chance of a case proving fatal in each sex is highest in the first year of life, and then diminishes rapidly and with unbroken regularity to the end of the twenty-fifth year, after which there is again an increase of risk.

Having now ascertained, firstly, what is the mortality from scarlet fever at each age-period and in either sex, and secondly, what number of cases correspond to each such death, it is of course a simple matter to combine the two tables and calculate the number of cases at each age-period and in each sex for equal numbers living, it being, however, important to notice that the cases thus obtained will be cases of equal severity to those which form the basis of Table E., that is to say, cases fit for admission into a hospital. The results are given in the following table.

TABLE F.—ESTIMATED ANNUAL CASES of SCARLET FEVER, of EQUAL SEVERITY to those ADMITTED into HOSPITAL, per MILLION LIVING, at SUCCESSIVE AGE-PERIODS and in EACH SEX.

AGES.	Males.	Females.
0—1	4,213	3,131
1—2	10,859	11,197
2—3	18,337	19,872
3—4	24,370	24,897
4—5	28,015	31,750
0—5	15,274	16,046
5—10	15,726	16,629
10—15	6,179	7,189
15—20	2,775	3,324
20—25	1,513	2,406
25—35	480	1,349
35 and upwards	153	231

So far our course has been simple, and the results arrived at may be accepted with much confidence, though it may be admitted that it would be more satisfactory were the basis of the table of case-mortality (Table E.) enlarged so as to embrace a greater number of cases and a longer series of years. But the next stage in the inquiry becomes much more hypothetical, and the result will consequently be less trustworthy. The question to which an answer has to be sought is, whether the diminution of cases of scarlet fever in successive age-periods, shown in Table F., is merely due to the increased proportion, at each successive age-period, of persons who have already been attacked by scarlet fever and are therefore protected against a future attack, or whether it indicates a diminishing susceptibility to the infection with advance of age in those who are as yet unprotected. It would not be difficult to obtain an answer to this question if the figures in Table E represented the general case-mortality and not merely the mortality of hospital cases; but, though scarlet fever patients are sent into hospital not only when they are severe cases, but often simply in order to separate an infectious child from the rest of the family, it cannot be doubted that on the whole the average of the hospital cases will be of more than average severity, there being notoriously a large number of scarlet fever cases in which the ailment is so slight, that it would not occur to the

parents to send the child away from home. Consequently the case-mortality as given in Table E. is almost certainly much too high; it is true for hospital cases, but not for all cases. Now there are some large towns in which returns are made of all known cases of scarlet fever, whether occurring in or out of hospitals, and, though these returns are neither of sufficient magnitude nor of sufficient certainty to afford a very secure basis, yet they afford some assistance, and judging by them we shall probably not be very far from the mark if we assume that, for every individual who is protected against future scarlet fever by an attack of equal severity to that of an average hospital case, there is another person protected by an attack of less severity. Let it be assumed then, that this is true, and then the next step can be taken; the proportion of the population that is protected at each successive age-period in each sex can be calculated, and the proportion between the cases and the unprotected population ascertained. The results of this somewhat tedious arithmetical process are given in the following table:—

TABLE G.—ESTIMATED* ANNUAL NUMBER of ATTACKS and DEATHS by SCARLET FEVER in a MILLION UNPROTECTED PERSONS of EACH SEX at SUCCESSIVE AGE PERIODS.

AGE.	Attacks.		Deaths.	
	Males.	Females.	Males.	Females.
0—1	6,779	4,887	1,668	1,386
1—2	17,758	18,723	4,220	3,916
2—3	33,065	36,480	4,832	4,647
3—4	47,385	48,874	4,801	4,657
4—5	58,906	68,036	4,095	4,036
5—10	37,524	40,423	2,100	2,060
10—15	17,332	20,817	499	567
15—20	8,365	10,508	171	182
20—25	4,714	7,972	94	130
25—30	1,491	4,585	58	101
30—35	472	787	21	26

* Estimated on the assumption stated above.

The figures in this table cannot of course claim to be more than approximate estimates. More precise results will be hereafter obtainable, when the case-mortality can be based upon a larger accumulation of data than was available for the construction of Table E., and which shall include the cases outside as well as those within hospitals. Allowing, fully, however, for this element of uncertainty as to the precise figures, we are nevertheless able to draw with much certainty the following conclusions as to scarlet fever:—

1. The mortality from this disease is at its maximum in the third year of life, and after this diminishes with age, at first slowly, afterwards rapidly. (Table D.)
2. This diminution is due to three contributory causes; (α) the increased proportion in the population at each successive age-period of persons protected by a previous attack; (β) the diminution of liability to infection in successive age-periods of those who are as yet unprotected; (γ) the diminishing risk in successive age-periods of an attack, should it occur, proving fatal.

3. The liability of the unprotected to infection is small in the first year of life, increases to a maximum in the fifth year or soon after*, and then becomes rapidly smaller and smaller with advance of years. (Table G. Cols. 1, 2).
4. The chance that an attack will terminate fatally is highest in infancy, and diminishes rapidly with years to the end of the twenty-fifth year; after which an attack is again somewhat more dangerous. (Table E.)
5. The female sex throughout life, the first year possibly† excepted, is more liable to scarlet fever than is the male sex. (Table G.)
6. But the attacks in males, though fewer, are more likely to terminate fatally. (Table E.)

Now it is sometimes said that the separation from its family of a child who is attacked by scarlet-fever is scarcely worth the trouble and expense it involves, seeing that the rest of the children, though they may escape on that special occasion, are almost certain to contract this very common disease at some future time, and may therefore as well, if not preferably, have it at once. The results, however, to which our statistical inquiry has led us, are completely subversive of such a position. They show—independently of the plain fact that a very large proportion of persons go through life without ever contracting this disease—that the longer an attack is deferred, the less likely it is to occur at all; and not only so, but that, even supposing it to occur eventually, the less likely it is to end fatally.

The deaths ascribed to *puerperal fever* were 2078, and those ascribed to *accidents of childbirth* 1799, making together 3877 deaths from parturition. This gives a proportion of 4·29 deaths to a thousand registered births of living children, the proportion in the preceding decennium 1871–80, having been 4·72. The proportion varied greatly in different registration counties, and was, as it also had been in the previous decennium, much above the general average in North and South Wales and in Shropshire. (Table 23.)

The deaths from *hydrophobia* which had risen in 1885 to 60, a higher number than in any year in our Table (Table 15), with the exceptions of 1874 and 1877, fell in 1886 to 26, and were fewer than in any year since 1869. Of these 26 deaths 10‡ occurred in London, while the remaining 16 were distributed as follows: Devonshire 1, Derbyshire 2, Cheshire 2, Lancashire 6, West Riding 5. This distribution tallied pretty closely with previous experience, Lancashire, and Cheshire being the counties that are found on an average of many years (1864–86) to have had the largest number of deaths from this disease in proportion to their populations, and the West Riding and Derbyshire also standing high up in the list. Could a census be taken of stray curs, the cause of this distribution would probably be apparent. In London, at any rate, the destruction of over 30,000 stray dogs in the nine months beginning with November 1885, and the compulsory muzzling of all other dogs in the streets, appears to have been most efficacious; for while in 1885 the deaths from hydrophobia registered in London had risen to the unprecedented number of 26, in 1886 they fell, as before stated, to 10‡; and, of these 10, 6 were registered in the first quarter, 2 each in the second and third quarters, and none in the last three months of the year.

* The Table does not suffice to show whether the fifth year be the year of actual maximum. For as the 5–10 year-period is not broken up into separate years the maximum might possibly be in the sixth or even seventh year.

† *See* first paragraph on p. xvi.

‡ One of these 10 deaths really occurred in 1885, but was not registered till 1886.

Parasitic diseases.—The deaths attributed to parasitic diseases were 990, and in the proportion of 35 to a million persons living; a proportion differing very little from that of the previous five years. Of these 990 deaths 810 were ascribed to thrush and 6 to other vegetable parasites; 58 to hydatids, and 116 to other animal parasites.

Dietetic Diseases.—The deaths under these headings numbered 1656, or 59 per million living. Most of these deaths were ascribed to delirium tremens or chronic alcoholism, which together caused 1392 deaths, or 49 per million living, a rate practically identical with that in the immediately preceding quinquennium (Table 17). It is noticeable that while chronic alcoholism is not vastly more common, as an assigned cause of death, in the male than in the female sex, 586 men and 459 women having according to the certificates thus died in the year, delirium tremens is six times as frequent among men as among women, the precise figures being 297 for the former and only 50 for the latter sex.

Constitutional Diseases.—These diseases caused 92,751 deaths in the year, or 3330 per million living, a proportion not far from the average in the previous five years (Table 17). The changes that occurred in 1886 in the mortality from the several diseases included in this group were all in the same direction as those of previous and recent years. Thus there was a small decline under Rheumatic Fever and other Rheumatic affections, and a larger decline under Phthisis, the death-rate from this cause being 1718 per million living, and lower than in any previous year (Table 16). On the other hand there was a further increase under Cancer, which, if the certificates are to be trusted, was 50 per cent. more common in 1886 than it was twenty years earlier; and also a slight further increase under Diabetes, which must, if again full reliance be placed on certificates as a measure of prevalence, have become nearly twice as frequent as it was twenty years back. It has, however, been pointed out in previous reports that very possibly, and in the opinion of the Registrar-General, most probably, some part of these increases, how much is uncertain, may be due to improved diagnosis and more careful statement of cause on the part of medical men.

Developmental Diseases.—The deaths of infants from premature birth numbered 13,642, and were in the proportion of 15,093 per million births of living children, the mean proportion in the preceding quinquennium, 1881–85, having been 14,185. As has been pointed out in previous reports, the proportion of premature births appears to be gradually increasing, and the figure now recorded is the highest as yet reached. The deaths from congenital malformations numbered 2343, the proportion to births scarcely differing from the average in recent years. As usual, cyanosis, imperforate anus, and cleft palate were much more common in male than in female children, while the opposite was the case with spina bifida.

The deaths ascribed simply to old age numbered 28,451, and were above the average of recent years, the increase being probably attributable to the excessively cold weather that prevailed in February and in December, cold being the special enemy of the old, as heat is of the young. The year 1886, with its hot summer and its cold winter months, was more than usually unfavourable both to old persons and to young children.

Local Diseases.—Among the many large groups of diseases comprised in this class there are three that show year by year an almost uninterrupted increase, namely, diseases of the nervous system, diseases of the circulatory system, and urinary diseases; and it will be seen, on referring to Table 16, that in 1886 the mortality under each of these was either at its maximum, or almost so.

Thus the mortality from nervous diseases, omitting convulsions, was in the ratio of 1835 deaths to a million living, a rate which had only three times been passed and once equalled in the previous 24 years, for which figures are given in the table (Table 16). Is the mortality from these diseases really increasing, or can the apparent increase be accounted for on the hypothesis of transference from other headings? If we take the five years 1861–5, and the five years 1881–5, we find that the mean annual mortality in the former period was 1546 per million living, while in the latter it was 1798 per million living.

There have been some slight changes of classification within the group, but not any that will have seriously affected the group as a whole, so that it appears that of a million persons living at each period, 252 more were certified to have died annually from nervous diseases in 1881–5 than was the case 20 years earlier. Examining carefully the ages of those who died, we find that of these 252 extra deaths 112 were deaths of children under five years of age, 47 were deaths of persons over five but under 65 years, and 93 were deaths of persons over 65 years of age. The increase then has been almost exclusively at the two extreme ends of life, and one cannot but suspect that much of the apparent increase under the heading Nervous Diseases may have been due to the simultaneous decrease under the heading Convulsions, which has added to the deaths in the 0–5 years period, and to the diminution under the heading Old Age, which has added to the deaths in the 65 years and upwards period; for had the increase been real and not in great part only apparent, had, that is, fatal nervous diseases been really largely increasing, the natural expectation would be that the increase would have affected all ages in much the same degree, and not have been confined almost exclusively to early childhood and advanced life.

The deaths from diseases of the circulatory system in 1886 were 1625 per million living, having been 1597 in 1885, and these two rates are the highest as yet recorded. Here again the question arises, whether the increase may not be due to transference from such headings as Debility, Old Age, and the like. A comparison of the age-tables for 1881–5 with those of 1861–5. renders it not improbable that such may be at any rate in part the case. For the increase in the mortality from this group of diseases has not been by any means equally divided between all ages, but has been far most marked among persons of advanced age. Thus the rate has remained practically unchanged for persons under 25 years of age; for persons over 25 but under 65 it has gone up 35 per cent.; while for persons above 65 it has increased by no less than 80 per cent.

The mortality from urinary diseases was in the ratio of 445 per million living, a ratio almost the same as in each of the three next preceding years, which are the only years in which it has reached as high as 400. In the course of the 25 years included in the table (Table 16) the registered mortality in this group of diseases has almost doubled. Again, however, the diminution of deaths under such headings as Dropsy has to be kept in mind.

It is of course very annoying to the student of mortality statistics, and not less so to those who are charged with their preparation, when they would make comparison between the past and the present, to be met at almost every step by this necessity of making allowance, and that to an uncertain amount, for the possibility of transference from one heading to another, and the very efforts made to improve the quality of these annual statistics by obtaining further information as to vaguely certified cases, and by inducing medical men to be more careful and precise in statement of cause, add somewhat to the difficulty in question; for the numbers under the more definite headings are thus gradually increased at the expense of the vaguer headings. It is useless, however, to shut our eyes to the imperfections of our records. To be without trustworthy means of comparison is doubtlessly an evil, but to ignore the

difficulties and to deal with the records as thoroughly reliable would be still worse, for it is far better to be without statistics at all than to be misled by false ones.

It is to be hoped that at some future period, when all medical men shall have become more alive to the value of accurate statistics of disease, and shall have realised that to give a false or careless certificate is not only to neglect their legal duty but to do their best to retard the advance of their own science, it may be possible for the Registrar-General to put out figures that will allow serial comparison to be made without risk of error, but to judge from the character of a considerable fraction of the medical certificates at the present date that time would seem to be as yet remote.

Violence.—The deaths from some or other kind of violence numbered 17,444, being 626 to a million persons living, a proportion almost identical with that recorded in the previous year.

The deaths from suicide, however, which numbered 2254, 1694 being of males and 560 of females, were more numerous in proportion to the population—80 per million—than in any earlier year with the exception of 1879, when the rate was also 80 per million.

On the other hand, the deaths ascribed to accident, 14,860 in number, were fewer in proportion to the population than on any previous occasion. In 1865 the accidental deaths were 735 per million living, but from that date the ratio has fallen almost uninterruptedly, until in 1886 it reached 534.

The fall in the mortality from homicide, which includes all cases in which a coroner's jury has returned a verdict of murder or of manslaughter, has been even more striking, for in 1866 the ratio of these deaths was 22 to a million living; but it has fallen gradually until in 1885 and 1886 it reached its present minimum of 11 per million, so that the rate fell 50 per cent. in the course of 20 years. Of these deaths from homicide, 311 in number, 171 were cases of murder, and 140 were cases of manslaughter. Nearly half the murders, 81 out of the 171, were cases of infanticide, that is murders of children in the first year, and generally the first month, of life; and more than 10 per cent. of the deaths ascribed to manslaughter were also deaths of infants. Taking the two together, and basing the calculation upon the records of 29 years, we obtain the following annual rates of death from homicide at successive age-periods, the rates being to a million living, with the exception of the line relating to infants under one year, where the rate is to a million registered births.

TABLE H.—DEATH-RATES FROM HOMICIDE PER MILLION LIVING at groups of ages, 1858-86.

	Per Million Births.	Per Million Living.										
AGES.	0–1	All Ages.	0–5	5–10	10–15	15–20	20–25	25–35	35–45	45–55	55–65	65 and upds.
Males - -	183	19	53	4	5	9	18	19	21	19	17	17
Females -	189	13	54	3	2	3	6	9	11	10	7	9

It will be noted that in infancy and childhood, to the end, that is, of the 10th year of life, there is practically no difference in the liability of the two sexes to death from homicide; but that after this throughout life males are very much more liable than females, as might be anticipated. In each sex the liability is far highest in infancy, and lowest in childhood, increasing after this to the 35–45 years period, and then slightly and gradually declining.

There remain for consideration deaths by execution. In 1886 19 persons died at the hands of the hangman, this being a larger number than in any year since 1877. Of these 19 persons who forfeited their lives, 18 were men and only one a woman; and, as is shown by the following table to be the general law, the greater part of these criminals were persons in the earlier and more turbulent half of ordinary life.

TABLE I.—SEXES and AGES of PERSONS EXECUTED in the 29 Years 1858–86.

AGES.	15—	20—	25—	35—	45—	55—	65—	75 and upwds.	TOTAL.
Males - -	22	82	135	74	35	12	3	0	363
Females -	0	0	10	8	2	1	1	0	22
PERSONS -	22	82	145	82	37	13	4	0	385

In these 29 years, 1858–86, in which 385 murderers were hanged, there were 10,823 deaths in which coroners' juries found verdicts of murder or of manslaughter, giving one person hanged to 28 acts of criminal homicide. If cases of simple manslaughter be omitted and the ratio calculated from murders only, we can only go back as far as 1863, for no separation of murder from manslaughter was made in the Registrar-General's Reports earlier than that year. In these 24 years, 1863–86, 331 persons were hanged, while there were 5116 verdicts of murder; or one criminal was punished by death to 15·5 recognised murders.

Ill-defined and not specified Causes.—The deaths classed in this unsatisfactory group were 29,283, or 5·5 per cent. of the whole. The number would have been still higher had not between two and three thousand letters been sent out from the department to medical men asking for further information than was given in their certificates. The information received in answer to these inquiries reduced the deaths under dropsy from 966 to 336, adding, of course, the balance to heart diseases, kidney diseases, and liver diseases. Similarly an addition was made of 202 deaths to childbirth and puerperal fever, of 148 deaths to violence, and of 472 deaths to other headings.

Certification of the Causes of Death.—During the year 1886 the causes of 490,264 or 91·3 per cent. of the 537,276 deaths were certified by registered medical practitioners; and the causes of 28,690, or 5·3 per cent., were certified by coroners after inquest. The causes of 18,322 or 3·4 per cent. of the total deaths were not certified, the proportion of uncertified deaths having steadily declined from 4·7 per cent. in 1879 to 3·5 per cent. in 1885. The proportion of uncertified deaths varies very considerably in different parts of England and Wales. In the Metropolis the proportion in 1886 did not exceed 1·1 per cent. Excluding the extra-metropolitan parts of Middlesex and Surrey, the per-centage ranged from 1·2 in Wiltshire, 1·3 in Buckinghamshire, 1·7 in Monmouthshire, and 1·8 in Sussex and in Hampshire, to 5·6 in Durham, 6·0 in Cornwall and in Huntingdonshire, 6·3 in Herefordshire, and 8·1 in Wales. The high per-centage in Wales showed, however, a further considerable decline from still higher per-centages in recent years.

Progress of Registration.

The number of names added during 1886 to the printed alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales was 1,833,284. At the close of the year the aggregate number of names in these indexes, which then embraced a period of 49½ years, was 73,937,736. The total number of searches in 1886 (excluding those in non-parochial and other records) was 35,355, showing a decline of 338 from the number in the previous year. The number of certificates issued was 26,706, and 997 fewer than in 1885. The amount received as fees for searches and certificates in the year 1886 and paid into Her Majesty's Exchequer was 5,168*l.* 16*s.* (Table 27.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pp. xxi–xxii and xxv–xxvi.

Mortality in the Army.*

The average strength of the Army, at home and abroad in 1886, was 203,805 and the deaths were 2,813, so that the rate of mortality was 13·8 per 1,000, and corresponded with the rate in 1885. The mortality in the army abroad was 20·0 per 1000, having averaged only 15·2 in the preceding five years; while the rate at home was only 7·2, and slightly below the rate in the five preceding years, in which it had averaged 7·8. (Table 30.)

Mortality in the Navy.†

The total force in the Service afloat in 1886 corrected for time, was 46,770. The deaths were 322, being in the ratio of 6·88 per 1000. Of the 322 deaths, 236 were due to disease, and 86 to violence; so that the death-rate from disease was 5·04 and from violence 1·84 per 1000.

Of the 86 violent deaths, 48 were from accidental drowning, 32 from other accidental causes, and 6 from suicide.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships not in Her Majesty's service, are required, under a penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, of Scotland, and of Ireland. Returns of a similar character are also received from the commanding officers of Her Majesty's ships. These certified copies of entries of births and deaths at sea constitute the "Marine Register Book." During the year 1886 the entries added to this Register related to 282 births and to 3937 deaths. Of these 3937 deaths, 1484 were of persons returned as of English origin, while 482 were indefinitely returned as of persons of "British" origin; of the latter number it is impossible to estimate correctly the proportion belonging to England and Wales.

Among *passengers* on board merchant vessels at sea (Table 33), 172 births and 515 deaths were reported in 1886; these numbers showed an increase of 31 births upon the number in 1885, while the deaths showed a decline of 83.

---

* From returns furnished by His Royal Highness the Commander-in-Chief.

† From data supplied by the Director-General of the Medical Department of the Navy.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports (Table 32), that the number of merchant seamen afloat in registered vessels during 1885 was 198,731, showing a slight decline from the numbers in the two previous years. The reported deaths from all causes among these merchant seamen during the year 1885 were 3286, and give an annual rate of 16·5 per 1000 of the strength; this rate was lower than in any previous year since 1852. The reported number of seamen afloat in 1886 was 205,478, and showed a marked increase upon the numbers in recent years, but the return of deaths for that year has not yet been received.

International Vital Statistics.

In Tables 40–57 will be found international vital statistics relating to most of the principal European States, in addition to the United Kingdom. Table 40 affords the means for comparing the marriage, birth, and death-rates in each State in a series of years, with the mean rate during the period 1861–80. Tables 41–57 give detailed statistics for the United Kingdom, and for the other European States.

The *marriage-rates* in 1886 showed a further general decline from the rates recorded in recent years; the rates in Austria and the Netherlands, however, exceptionally showed an increase. The rates in the countries furnishing returns ranged from 13·1 in the United Kingdom and in Norway, to 15·5 in Austria, 15·6 in Italy, and 15·8 in the German Empire.

The *birth-rates* showed a further general decline (which was most marked in Italy), but the rates in the German and Austrian Empires, and in the Netherlands, had slightly increased. The rates in the various states ranged from 23·9 in France, 27·5 in Switzerland, and 29·6 in Belgium, to 37·1 in the German Empire, and 37·7 in the Austrian Empire.

The *death-rates* did not show any considerable variations from those recorded in the preceding year, excepting only a marked increase in Italy, namely from 26·6 to 28·3. The mean death-rate in 1886 in the nine Continental States furnishing returns was 25·5 (against 25·0 in 1885), and exceeded the rate in the United Kingdom by no less than 6·5 per 1000. The rates in the various states furnishing returns, ranged from 16·1 in Norway, 18·2 in Denmark, and 19·0 in the United Kingdom, to 26·2 in the German Empire, 28·3 in Italy, and 29·2 in the Austrian Empire.

I have the honour to be,
Sir,
Your faithful Servant,
BRYDGES P. HENNIKER,
Registrar-General.

Remarks on the Meteorology of the Year 1886.*

By James Glaisher, Esq. F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on the observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The readings of the barometer were generally below their averages till February 3rd, particularly so on or about January 13th, when the weather was stormy with high wind; the average daily deficiency of pressure to February 3rd was 0·29 in.; from February 4th to 27th the pressure was generally above the average, the mean daily excess was 0·23 in.; from February 28th to March 6th, there was a mean daily deficiency of 0·42 in.; then for a week to March 14th there was an average daily excess of 0·25 in.; from March 15th to April 11th, there was an average daily deficiency of 0·08 in.; from April 12th to May 9th, the readings were generally high, the mean daily excess being 0·18 in.; then to the 18th, the mean daily deficiency was 0·19 in.; from May 19th to June 5th, the daily readings differed very little from their averages; from June 6th to the 13th there was a slight deficiency of 0·10 daily; then for 28 days to July 11th, there was a mean daily excess of 0·11 in.; from July 12th to August 2nd there was a mean daily deficiency of 0·16 in.; from August 3rd to September 3rd the pressure was variable, being chiefly above the average for these 31 days, the mean daily excess was 0·05 in.; from September 4th to 12th there was an average daily deficiency of 0·1 in.; from September 13th to October 8th the pressure was generally above the average, the mean daily excess was 0·08 in.; from October 9th to 20th the readings were low, the average daily deficiency was 0·42 in.; for the 14 days ending November 3rd, there was an average daily excess of 0·24 in.; from November 4th to 17th, the readings were low, the mean daily deficiency being 0·45 in.; from November 18th to 28th the readings were high, the excess averaging 0·56 in. daily, and from November 29th to the end of the year, the atmospheric pressure was generally below its average, the average daily deficiency for the 33 days ending December 31st, was 0·28 in. On the 8th and 9th of December the readings were nearly 1·4 in. below their averages; see remarks in Report for the Quarter ending December 31st.

The highest reading of the barometer in the year at the height of 150 feet above the sea was 30·55 ins. on February 8th, and the lowest was 28·14 ins. on December 9th; the yearly range was 2·41 ins.

Temperature.—Till the 5th of January the mean daily temperature was above its average, the mean daily excess was 6°·6; on the 6th a cold period set in and continued with but few exceptions till March 18th, the mean daily deficiency for these 72 days was 6°·0. From March 19th to April 6th it was warm, the mean excess for these 19 days was 4°·8; from April 7th to May 4th the weather was changeable, being sometimes warm, but generally cold, the mean deficiency of daily temperature for these 27 days was 2°·2, from May 4th to 10th, it was warm, the average daily excess of temperature was 4°·9. On May 11th a cold period set in and continued with a few exceptions to June 24th, the average daily deficiency of temperature of these 45 days was 2°·7; from June 25th to July 7th the weather was warm, the average excess of daily temperature was 4°·1; from July 8th to August 21st, the weather was mostly cold; the exceptions were July 18th to 22nd and August 6th to 9th, the average

* For Meteorological Tables, *see* pp. lxiv–lxix.

daily deficiency of these 45 days was 1°·6. On August 22nd a period of warm weather set in and continued with slight exceptions to September 14th, the mean daily excess being 4°·8; from September 15th to 26th was cold, the deficiency of temperature was 2°·1 daily; from September 27th to October 12th the temperature was above its average by 4° daily; from October 13th, to October 18th, the average daily deficiency was 0°·8; from October 19th to November 21st, with the exception of the 5 days, November 6th to November 10th was warm, the average daily excess of temperature of these 34 days was 1°·7; from November 22nd to December 5th was cold, the mean deficiency of daily temperature was 4°·1; the weather was warm on the 10 days ending December 15th, the mean excess of daily temperature being 2°·5; and from December 16th to 31st the weather was cold, the mean daily deficiency was 5°·3.

The highest temperatures of the air in the year were 90°·2 at Osborne, 89°·8 at the Royal Observatory, and 89°·0 at Salisbury; and the lowest were 4°·2 at Carlisle, 7°·0 at Barnet, and 9°·0 at Hull.

Rainfall.—The fall of rain was above its average in January, somewhat below in February and March. The total fall in these three months at Greenwich was 5·38 ins., being 0·41 in. above the average. The fall was below its average in April, above in May, and somewhat below in June. At Greenwich the total fall in these three months was 5·93 ins., being 0·14 in. above the average. The falls of rain in July were very near their averages, and below in August and September. At Greenwich the total fall in these three months was 4·87 ins., being 2·46 ins. below the average. The falls of rain were below their averages in October, and above in November and December. At Greenwich the total fall for these three months was 8·03 ins., being 0·91 in. above the average. The total fall of rain in the year was 24·21 ins., being 1·03 in. less than the average, and the number of days on which it fell was 163.

The heaviest falls of rain in the year at our stations were at Stonyhurst 52·89 ins., at Guernsey 45·21 ins., and at Barnstaple 45·05 ins.

The least falls were at Lowestoft 22·28 ins., at Somerleyton 23·50 ins., and at Blackheath 23·82 ins.

The greatest number of days of rain was 237 at Nottingham, 228 at Guernsey, and 226 at Burslem; and the smallest number of rainy days was 146 at Blackheath, 154 at Barnet, and 158 at Somerleyton.

Thunderstorms occurred on 57 days at the different stations during the year; of these 9 took place in October, 7 in each of the months of January, April, May, and December, 5 in July, 5 in September, 4 in August, 3 in June, 2 in March, 1 in November, and no thunderstorms were reported in February.

Thunder was heard but lightning was not seen on 47 days during the year; 8 were in each of the months of April and October, 7 in May, 7 in June, 6 in July, 6 in August, 2 in each of the months of September and December, 1 in March. None in the months of January, February, and November.

Lightning was seen but thunder was not heard on 48 days during the year; 11 of which were in October, 9 in December, 7 in September, 5 in January, 4 in June, 3 in each of the months of March, May, and August, 1 in July, 1 in November, and none in February.

Solar halos were seen on 76 days during the year; 13 of which were in April, 12 in May, 10 in each of the months of June and October, 6 in each of the months of March, July, and August, 4 in September, 4 in December, 2 in January, 2 in November, and 1 in February.

Lunar halos were seen on 40 nights during the year; there were 10 in December, 6 in January, 5 in each of the months of October and November, 3 in each of the months of March, April, and May, 2 in February, 2 in September, and 1 in June.

Auroræ boreales were seen on 3 nights during the year; there were 1 in January, 1 in March, and 1 in April.

Snow fell on 102 days during the year; 27 in January, 22 in December, 20 in February, 18 in March, 8 in April, 5 in May, and 2 in November; the day of last fall in the spring was May 26th, none fell in June, July, August, September, or October; the first fall in the autumn was on November 6th at Bradford.

Hail fell on 97 days in the year, 21 in December, 15 in January, 11 in April, 9 in November, 8 in March, 7 in each of the months of February and May, 6 in August, 6 in October, 3 in June, and 2 in each of the months of July and September. The fall on December 26 was general and was heavy.

Fog prevailed on 167 days in the year; on 22 days in January, 18 in February, 18 in October, 17 in each of the months of March and December, 15 in August, 15 in November, 12 in April, 10 in September, 9 in May, 8 in June, and 6 in July.

TABLE 22.—ENGLAND.—**Deaths from various Causes, to a Million Deaths from All Causes, 1886.**

CAUSE OF DEATH.	Proportional Number.
ALL CAUSES	1,000,000
Small-pox	512
Chicken-pox	173
Measles	22859
Epidemic Rose Rash	132
Scarlet Fever	11141
Typhus	456
Relapsing Fever	18
Influenza	154
Whooping-cough	24077
Mumps	136
Diphtheria	7637
Cerebro-spinal Fever	74
Simple and Ill-defined Fever	1126
Enteric Fever	9420
Other Miasmatic Diseases	2
Cholera	998
Diarrhœa, Dysentery	46062
Remittent Fever	286
Ague	164
Hydrophobia	48
Glanders	9
Splenic Fever	20
Cow-pox and other Effects of Vaccination	84
Syphilis	4152
Gonorrhœa, Stricture of Urethra	542
Phagedæna	86
Erysipelas	2835
Pyæmia, Septicæmia	609
Puerperal Fever	3868
Thrush	1508
Other Diseases from Vegetable parasites	11
Hydatid Disease	108
Other Diseases from Animal parasites	216
Starvation, Want of Breast-milk	460
Scurvy	33
Intemperance — Chronic Alcoholism	1945
Intemperance — Delirium Tremens	646
Rheumatic Fever, Rheumatism of Heart	4709
Rheumatism	1614
Gout	975
Rickets	1467
Cancer	30232
Tabes Mesenterica	13883
Tubercular Meningitis (Acute Hydrocephalus)	13165
Phthisis	89101
Other Forms of Tuberculosis, Scrofula	9057
Purpura, Hæmorrhagic Diathesis	607
Anæmia, Chlorosis, Leucocythæmia	2358
Diabetes Mellitus	3041
Other Constitutional Diseases	922
Premature Birth	25391
Atelectasis	1241
Cyanosis	1980
Spina Bifida	1130
Imperforate Anus	344
Cleft Palate, Harelip	372
Other Congenital Defects	584
Old Age	52984

CAUSE OF DEATH.	Proportional Number.
Inflammation of Brain or its Membranes	17326
Apoplexy	29938
Softening of Brain	6462
Hemiplegia, Brain Paralysis	17459
Paralysis Agitans	389
Insanity, General Paralysis of Insane	4106
Chorea	194
Epilepsy	5889
Convulsions	42592
Laryngismus Stridulus	1320
Idiopathic Tetanus	95
Paraplegia, Diseases of Spinal Cord	3577
Other Diseases of Nervous System	8037
Otitis, Otorrhœa	761
Epistaxis and Diseases of Nose	166
Ophthalmia and Diseases of Eye	130
Endocarditis, Valvular Disease	13192
Pericarditis	886
Hypertrophy of Heart	651
Angina Pectoris	1070
Syncope	2909
Aneurism	1627
Senile Gangrene	2743
Embolism, Thrombosis	1625
Phlebitis	223
Varicose Veins	156
Other Diseases of Circulatory System	59810
Laryngitis	2080
Croup	6859
Other Diseases of Larynx and Trachea	324
Emphysema, Asthma	4530
Bronchitis	114352
Pneumonia	52207
Pleurisy	2730
Other Diseases of Respiratory System	9397
Stomatitis	996
Dentition	9118
Sore Throat, Quinsy	1124
Dyspepsia	968
Hæmatemesis	814
Melæna	342
Diseases of Stomach	6397
Enteritis	7350
Ulceration of Intestine	1061
Ileus, Obstruction of Intestine	3559
Stricture or Strangulation of Intestine	436
Intussusception of Intestine	862
Hernia	2247
Fistula	229
Peritonitis	4242
Ascites	605
Gallstones	391
Cirrhosis of Liver	6524
Other Diseases of Liver	16838
Other Diseases of Digestive System	1061
Diseases of Lymphatic System	406
Diseases of Spleen	244
Bronchocele	229
Addison's Disease	311

CAUSE OF DEATH.	Proportional Number.
Acute Nephritis	2220
Bright's Disease	12729
Uræmia	951
Suppression of Urine	298
Calculus	484
Hæmaturia	270
Diseases of Bladder and of Prostate	3922
Other Diseases of Urinary System	2315
Ovarian Disease	1094
Diseases of Uterus and Vagina	12·6
Disorders of Menstruation	112
Pelvic Abscess	294
Perineal Abscess	43
Diseases of Testes, Penis, Scrotum, &c.	136
Abortion, Miscarriage	199
Puerperal Mania	132
Puerperal Convulsions	624
Placenta Prævia, Flooding	1441
Phlegmasia Dolens	155
Other Accidents of Childbirth	800
Caries, Necrosis	2124
Arthritis, Ostitis, Periostitis	417
Other Diseases of Organs of Locomotion	2174
Carbuncle	305
Phlegmon, Cellulitis	495
Lupus	128
Ulcer, Bedsore	1160
Eczema	763
Pemphigus	166
Other Diseases of Integumentary System	400
Accident. — Fractures and Contusions	12174
Accident. — Gunshot Wounds	134
Accident. — Cut, Stab	279
Accident. — Burn, Scald	3737
Accident. — Poison	612
Accident. — Drowning	5221
Accident. — Suffocation	3406
Accident. — Otherwise	2044
Murder, Manslaughter	379
Suicide. — Gunshot Wounds	307
Suicide. — Cut, Stab	735
Suicide. — Poison	532
Suicide. — Drowning	957
Suicide. — Hanging	1320
Suicide. — Otherwise	355
Execution	35
Dropsy	625
Debility, Atrophy, Inanition	44942
Mortification	127
Tumour	668
Abscess	1201
Hæmorrhage	268
Sudden (Cause unascertained)	815
Other ill-defined and not specified Causes	5857

TABLE 23.—ENGLAND.—**Death-rates** from **Measles, Scarlet Fever, Fever, Whooping-cough,** and **Puerperal Fever** and **Childbirth,** in **Registration Counties,** in **1871-80,*** and **1886.**

REGISTRATION COUNTY.	To a Million Persons Living.								To 1000 Births.

* The prices of coal in 1853-81 are derived from a Parliamentary Return (No. 225, 1881) furnished by the Registrar of the London Coal Market, by order of the House of Commons: the quotations for 1882-6 are the means of the four quarterly averages. The quarterly averages were from time to time supplied to the Registrar-General by Mr. Richard Meade, of the Mineral Statistics Department, Home Office.

† Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

TABLE 34.—ENGLAND.—**Changes** in the **Constitution** of **Registration Districts** and **Sub-districts** during the Year **1886.**

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1886.	
146	BUCKINGHAM	1 April	The sub-districts of this district were reduced from three to two. The sub-district of *Leckhampstead* was dissolved and the fourteen parishes formerly comprised therein (aggregate population 3,631), together with the parish of Buckingham (population 3,585) were constituted the sub-district of *Buckingham* (aggregate population 7,216). The remaining five parishes belonging to the former sub-district of *Buckingham*, viz., Padbury, Adstock, Addington, Steeple Claydon, and Middle Claydon (aggregate population 2,093) were added to the sub-district of *Tingewick*.
147	HENLEY	1 April	The sub-districts of this district were increased from two to three. The parishes of Eye and Dunsden, and Caversham (population 4,446) were transferred from the sub-district of *Henley* and constituted the new sub-district of *Caversham*, and three other parishes, viz., Ipsden, Nuffield, and Nettlebed (population 1,571) were transferred from the sub-district of *Henley* to that of *Watlington*.
181	NEWMARKET	1 February	The sub-districts of *Bottisham* and *Newmarket* were united under the name of *Newmarket* (aggregate population 10,061).
214	WOODBRIDGE	1 April	The parishes of Bromeswell, Melton, and Ufford (population 2,164) were transferred from the sub-district of *Carlford* to that of *Woodbridge and Wilford*.
284	SOUTH MOLTON	1 January	The sub-district of *Chulmleigh* (aggregate population 4,083) was dissolved, three parishes, viz., Cheldon, Meshaw, and East and West Worlington (aggregate population 633) were added to the *Witheridge* sub-district, and seven parishes, viz., Burrington, Chulmleigh, George Nympton, King's Nympton, Romansleigh, Satterleigh, and Warkleigh (aggregate population 3,450) were added to the *South Molton* sub-district. The parish of Exmoor (population 313) was taken from the *South Molton* sub-district and constituted a new sub-district called *Exmoor*.
379	WORCESTER	1 January	The sub-districts of *Worcester West* and *Worcester South* were united under the name of *Worcester South-west* (aggregate population 22,942).
461	BOLTON	1 February	The sub-districts of *Bolton Eastern* and *Bolton Western* were united under the name of *Great Bolton* (aggregate (population 45,694).
561	BELLINGHAM	29 April	The townships of Leemailing and Nook (population 265) were transferred from the sub-district of *Kirkwhelpington* to that of *Bellingham*.
613	MACHYNLLETH	25 April	The sub-district of *Pennal* was re-named *Towyn*.
628	BANGOR	1 August	The parish of Llandegai (population 3,587) was transferred from the sub-district of *Bangor* to that of *Llanllechid*, and the parishes of Aber and Llanfairfechan (population 2,483) were transferred from the sub-district of *Llanllechid* to that of *Bangor*.

Under the provisions of "The Divided Parishes and Poor Law Amendment Act, 1876," changes were made on the 25th March 1886 in the constitution of the following Districts, viz.:—CRANBROOK (52), EAST ASHFORD (55), ELHAM (65), ROMNEY MARSH (66), BATTLE (69), TICEHURST (72), HAVANT (87), ALVERSTOKE (89), FAREHAM (90), FARINGDON (114), WYCOMBE (142), AYLESBURY (143), NEWPORT PAGNELL (145*), THAME (148), WITNEY (153), PETERBOROUGH (167*), LEIGHTON BUZZARD (175*), LINTON (180), NEWMARKET (181), WIMBORNE (261*), SHERBORNE (266*), TOTNES (274), KINGSBRIDGE (275), WILLITON (303*), BRIDGWATER (307*), LANGPORT (308), CHARD (309), WINCANTON (311), SHEPTON MALLETT (313), CLUTTON (316), BATH (317), WHEATENHURST (328), STROUD (329), UTTOXETER (366), MARKET BOSWORTH (405*), GAINSBOROUGH (426), EAST RETFORD (427), BELPER (437), ASHBORNE (438), HUDDERSFIELD (495*), ROTHERHAM (510*), SCARBOROUGH (526), PICKERING (531), GUISBROUGH (533*), BEDALE (537), LEYBURN (538), AYSGARTH (539*), STOCKTON (543), LANCHESTER (548), DURHAM (549), CHESTER-LE-STREET (552), BELLINGHAM (561*), PENRITH (569), CARLISLE (572), and BOOTLE (576*).

* In these cases the limits of sub-districts only are affected.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

1876	17,455,375	114,337	228,654	579,067	508,439	13·1	33·2	29·F
1877	—	—	—	—	—	—	—	—
1878*	16,684,345	117,693	235,386	606,826	503,390	14·2	36·6	30·6

Note.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for subsequent Years has been deduced from the Excess of Births over Deaths registered in each Year. The facts for the five years 1871-75 were not collected owing to the disturbed state of the country; those for the year 1877 and for the years 1879-86 have not yet been finally dealt with. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

Note.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The populations in inter-census years are somewhat over-estimated, no account having been taken of emigration.

NOTE.—For area and population of the Registration Divisions and Counties, *see* pages 64-67.

* The *Registration Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

BIRTHS, DEATHS, and MARRIAGES, registered in the Year 1886—*continued.*

* The 632 *Superintendent Registrars' or Registration Districts* (Paddington 1a and Holyhead 630b having been constituted Superintendent Registrars' Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2143 in number at the end of the year 1886) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† The Deaths in the principal Institutions of England in 1886 are given on pages 71-92.

* 146: 1 and 2.—On the 1st April 1886 the sub-district of Leckhampstead was dissolved, and the parishes comprised therein were added to the sub-districts of Buckingham and Tingewick.

† On the 1st April 1886 the parishes of Henley district were re-arranged and divided into three instead of two sub-districts.

* The *Registration or Union Counties* consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Census Report of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks.

CIVIL CONDITION; AGE; SIGNATURE OF REGISTER.

																					182,462	Husbands
Total Wives	22	234	1657	7016	13298	17342	73449	39169	13052	6884	4260	2828	1562	915	525	200	43	5	1	–	182,462	Wives.

AGES OF HUSBANDS.

* Including a spinster said to be at the age of 14 years.

The Table read *vertically* shows the number of *Wives* at each age, with the ages of their Husbands at marriage:—Thus, Of 17,342 *Wives* at the age of 20 and under 21 years *one* married a Husband aged 16; *ten* married Husbands aged 17; *seventy-nine* married Husbands aged 18; *five hundred and forty-seven* married Husbands aged 19 years, &c.

Read *horizontally* the Table shows the number of *Husbands* at each age, with the ages of their Wives when married:—Thus, Of 8,506 Husbands aged 20 and under 21 years *four* married Wives aged 15; *thirty-six* married Wives aged 16 years, &c.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1886.

The following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1886 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1671 Institutions; of which 732 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 851 Hospitals or Infirmaries; and 88 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1671 Institutions 57,425 deaths were registered during the year, or 10·7 per cent. of the total deaths in England and Wales, against 10·3 and 10·8 per cent. in the two preceding years; 35,140 occurred in Workhouses, 16,763 in Hospitals, and 5522 in Lunatic Asylums. The proportion to total deaths was 6·6 per cent. in Workhouses, 3·1 in Hospitals, and 1·0 in Lunatic Asylums; the proportion of deaths recorded in Workhouses showed a slight decline from that recorded in the preceding year; the proportion of deaths that occurred in Workhouse establishments was 5·6 per cent. in 1875, after which it steadily increased to 6·7 per cent. in 1885, declining again to 6·6 in 1886.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Private Asylums for Idiots and Imbeciles, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1886.

* The deaths of 24 males from Hydrophobia in the year are classed under Zoogenous Diseases in the Table of Causes of Death, p. 108.
† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury. The same is done with deaths attributed to Traumatic Tetanus. The figures above refer, therefore, only to those deaths from operation and those deaths from Traumatic Tetanus concerning which no further information was obtained.

OF the above 10,812 ACCIDENTS, 102 are stated to have occurred to Persons in a state of INTOXICATION, and 2 to Persons suffering from DELIRIUM TREMENS. And in 233 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year.		1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.

INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881.

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 196) *and "Index of certain Towns"* (page 206).

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	366; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley	Watford	137; 4
